

PART I INTRODUCTION 1

CHAPTER 1

THE QUEST FOR UNDERSTANDING 3

Objectives 4

Glossary 5

1. Introduction 5

2. Ways of Knowing 8

Revelation 8

Authority 9

Intuition 10

Everyday experience – common sense 10

Science 11

3. The Meaning of Cause and Effect 13

Time order 15

Mutual patterned change (association) 16

No other plausible explanation 16

Belief in a true link 17

A final note on causation 17

4. The Tentative Nature of Science 18

Unseens and unknowns 18

Representativeness of observations 19

Distorted observations 19

Ambiguity of data analysis 20

5. The Plan of the Book 20

6. Summary 21

Exercises 22

Project 23

References 24

CHAPTER 2

SEEING OUR ENVIRONMENT WITH CONCEPTS AND VARIABLES 25

Objectives 26

Glossary 27

1. Introduction 28

2. The Conceptualization Process 30

3. The Defining Process 31

4. From Definition to Measurement and Back Again 34

5. Scales and Indexes 37

6. General Ideas of Validity and Reliability 39

7. The Nature of Categories and Intervals 40

8. Summary	47
Exercises	49
Project	51
References	52

PART II WHAT ARE WE SEARCHING FOR? 53

CHAPTER 3

RELATIONSHIPS 55

Objectives 56

Glossary 57

1. Viewing Systems of Variables 57
 2. The Role of Relationships in Causation 60
 3. Finding Patterned, Mutual Change – The Scatterplot 61
 4. Moving from Observations to Scatterplots 67
 5. Nongraphic Ways to Determine Relationships 77
 6. Theory, Propositions, and Hypotheses in Research 78
 7. Summary 79
- Exercises 80
Project 82
References 82

CHAPTER 4

DETECTING RELATIONSHIPS WITH PERCENTAGES 83

Objectives 84

Glossary 85

1. Introduction 85
2. Reviewing the Types of Relationships and Change 86
3. Percentage Tables as Estimates of Scatterplots 87
4. Showing Change in the Independent Variable 90

Surveys 91

Cross-sectional surveys 91

Longitudinal panel surveys 92

Cumulative surveys 92

Experiments 93

Classical (simple) design 94

Multiple-X design 95

Summary for showing change in the independent variable 95

5. Showing Change in the Dependent Variable 95

Constructing simple frequency distributions 96

Constructing simple percentage distributions 98

Using percentages for cross-tabular analysis 101

Summary for the dependent variable 104

6. Putting It Together: Percentage Tables 105

7. Viewing Bivariate Relationships with Percentages 108

The form of a relationship 108
Extent and precision (strength) of a relationship 112
Estimating scatterplots and "Reading the Numbers" 113

8. Special Note on Nominal Level Variables 117

9. A Final Caution 120

The importance of labeling 120

Cutting points 120

Direction of percentaging 121

10. Summary 121

Exercises 122

Project 125

PART III BEGINNING THE SEARCH FOR RELATIONSHIPS 127

CHAPTER 5

THE FIRST STEP IN EXPLORING A RELATIONSHIP 129

Objectives 130

Glossary 131

1. Introduction 131

2. What Are We Looking For? 132

Research traditions 132

Theoretical development 132

Source of hypotheses 133

Definitions 133

Specific findings 133

Paraphrases 134

Quotations 134

3. Why Do We Want Them? 134

4. Where Do We Look? 136

The library 136

Periodicals 137

Books in print 142

Documents 142

Information systems 143

Computer services 143

Personal contacts 144

Commercial Enterprises 145

5. How Do We Go About It? 145

Constructing key word lists 145

Follow-up on citations in previous works 147

Form of citations when writing 147

6. Summary 148

Exercises 149

Project 149
References 150

CHAPTER 6

THE ETHICS OF RESEARCH ON HUMAN SUBJECTS 151

Objectives 152

Glossary 153

1. The Importance of Ethics in Research on Human Subjects 152

2. The Basic Dilemma 153

3. The Subject as a Person 155

The right of self-determination 156*Voluntarism* 156*Informed consent* 157*Equal Opportunity* 158*Delivery of promises* 160*Maintaining self-respect* 161*Protecting privacy* 162

4. Ethical No-No's 163

Fabrication of data 164*Plagiarism* 164*Exploitation of assistants and/or subjects* 164

5. Ethical Guidelines 165

6. Summary 165

Exercises 166

Project 167

References 167

CHAPTER 7

ORGANIZING AND SUMMARIZING OUR OBSERVATIONS 169

Objectives 170

Glossary 171

1. Introduction 172

2. Cumulative Frequency and Percentage Distributions 172

3. Grouped Data 174

4. Graphic Presentations 175

5. Central Tendency and Dispersion 181

General definitions 182*Calculations for simple data* 184*The mode* 184*The mean* 184*The median* 186*The range* 187*Mean deviation* 187*Standard deviation* 189*Calculations for grouped data* 190*The mode* 190*The mean* 190

<i>The median</i>	191
<i>The range</i>	192
<i>Mean deviation</i>	192
<i>Standard deviation</i>	193
<i>Problems of interpretation</i>	193
6. Using Statistics to Estimate Scatterplots	196
7. Summary	197
Exercises	198
Project	203
References	203

CHAPTER 8

COMPUTER USE 205

Objectives 206

Glossary 207

1. The Mystery Machine 207

2. The Role of the Computer User 208

Machines and devices at your disposal 209

What the user must be able to do 209

The keypunch (cardpunch) machine 213

The teletype 215

3. The Programmer and Programs 217

4. Bits and Pieces 218

Card layout 218

Writing variable format statements 220

Use of tapes 221

5. Can We Trust the Computer? 221

6. Summary 222

Exercises 222

Project 223

References 223

PART IV MAKING OBSERVATIONS AND COMING TO CONCLUSIONS 225

CHAPTER 9

THE GRAND MASTER: THE EXPERIMENT 227

Observations 228

Glossary 229

1. Introduction 231

2. The Classical Experiment 232

3. Equivalency of Experimental Groups 236

4. The Common Sense "Experiment" 239

5. The One-Group Pretest-Posttest Design 240
6. The Simple Survey or Static-Group Comparison 240
7. The One-Shot Case Study 241
8. Sources of Confounding Influences 242

Differences in subject characteristics 243

Environmental changes 243

Maturation 244

Testing 244

Instrument Decay 245

Subject mortality 245

Unreliable measures of extreme groups 246

Reactivity 247

Experimenter bias 247

9. Generalization 247

Subjects 249

Setting 249

Manipulations and measures 250

Timing of events 254

Unique circumstances 255

10. Experiments: A Brief Assessment 255

11. Summary 256

Exercises 257

Project 258

References 259

CHAPTER 10

THE OMNIPRESENT SURVEY 261

Objectives 262

Glossary 263

1. Survey Design 265

Beginning the survey 265

Review of published material 266

Selecting variables and stating hypotheses 266

Developing indicators 267

Pilot studies 267

Specification of the research population 268

Sampling 268

Gaining access to subjects 269

Financing surveys 270

Data collection 271

Data reduction 271

Data analysis 272

Dissemination of findings 273

2. Question Construction 274

Word meaning 274

Double-barreled questions 275

Double negative questions 276
Prestige bias (socially acceptable response) 276
Leading questions 277
Emotionally loaded questions 278
Embarrassing questions 278
Assuming prior knowledge 279
Use of jargon or slang 279

3. Responses for Fixed Alternative Questions 280

Mutually inclusive (exhaustive) categories 280
Mutually exclusive categories 280
Residual categories 281
Balanced responses 282
Special exceptions 282

4. The Mailed Questionnaire 283

Questionnaire construction 283
Follow-ups 284
Inducements 285

5. Face-to-Face Interviews 286

Interview structure 287

6. Comparing Mailed Questionnaires with Interviews 289

7. Summary 290

Exercises 291

Project 293

References 294

CHAPTER 11

MEASURING AND ACCOUNTING FOR OTHER VARIABLES 295

Objectives 296

Glossary 297

1. Introduction 297

2. What it Means to “Control” for a Variable 299

3. Exploring Three Variable Models with Scatterplots 303

Spurious model 304

Intervening model 306

Complicated model 307

Joint-effects model 310

No-effect model 310

4. Analyzing Three Variable Models with Percentages 313

5. Conclusions 317

6. Summary 319

Exercises 321

Project 327

References 327

CHAPTER 12

OTHER RESEARCH DESIGNS 329

Objectives 330

Glossary 331

1. "Leftovers" or "Golden Opportunities?" 332

2. Participant Observation / Field Research 333

What is participant observation? 333*Why participant observation?* 334*Exploration* 334*Access to subjects* 335*Richness of data* 336*How to do participant observation* 337*Problem selection* 337*Choice of setting* 338*Establishing social relationships* 339*Finding informants* 340*Establishing rapport* 341*Rapport in complete and disguised observation* 341*After the study* 342*Recording of data* 342*Summary of participant observation* 343

3. Content Analysis 343

What is content analysis? 343*What are its various uses?* 344*Cultural comparisons* 344*Meanings and intentions* 345*Indirect measurement of character and personality* 345*Social trends* 346*How is content analysis done?* 347*Selecting a sample* 347*Coding of material* 347*The need for comparisons* 348*Advantages and disadvantages of content analysis* 349*Are the mass media a cause or an effect?* 349

4. Simulation 350

The crucial aspect of simulation – the model 351*Some uses of simulation* 352*Prediction* 352*Planning* 352*Quasi-research purposes* 353

5. Evaluation Research 354

Formative versus summative evaluation 355*Experimental design and evaluation* 357*The uses of evaluation* 359

6. Unobtrusive Measures 360

The problem of reactivity 360*Major types of unobtrusive measures* 361

The future of unobtrusive research 362

A note about census data and secondary analysis 363

7. Conclusions 364

8. Summary 365

Exercises 365

Project 367

References 368

CHAPTER 13

MEASURES OF ASSOCIATION 371

Objectives 372

Glossary 373

1. The Basic Idea of Association 374

2. The Logic of Proportional Reduction of Error 374

3. Computation of Lambda 376

Determining original error 376

Determining new error 377

Comparing original error to new error 378

Characteristics of lambda 379

4. Computation of Correlation and Coefficient of Determination 383

Determining original error 384

Determining new error 385

Comparing original error to new error 386

Characteristics of r and r^2 387

5. Association as Explained Variance 389

6. Multivariate Analysis with Measures of Association 390

Controlling by partitioning 390

Controlling by partial measures of association 391

The simultaneous examination of multivariate models 392

Multiple regression analysis 392

Path analysis 393

7. Summary 394

Exercises 395

Project 396

References 396

PART V QUESTIONING OUR CONCLUSIONS 397

CHAPTER 14

RELIABILITY AND VALIDITY 399

Objectives 400

Glossary 401

1. Introduction 402

2. Reliability 403

Stability reliability 403*Equivalence reliability* 404*What produces unreliability?* 406

3. Validity 407

Face validity 408*Content validity* 410*Criterion validity* 411*Concurrent validity* 411*Predictive validity* 413*Construct validity* 414*Showing the interrelationship of indicators* 415*Showing relationships to hypothesized variables* 416*Showing the lack of inappropriate relationships* 417

4. Conclusions 417

5. Summary 418

Exercises 419

Project 420

References 421

CHAPTER 15

SAMPLING 423

Objectives 424

Glossary 425

1. The General Problem of Sampling 426

2. How to Generalize 430

3. Sampling for Surveys 433

Simple random samples 433*Systematic samples* 435*Stratified samples* 436*Cluster samples* 436*Purposive samples* 437*Quota samples* 437*Availability samples* 437

4. Sampling and Other Research Designs 438

Experiments 438*Unobtrusive studies* 438*Participant observation* 438*Simulation* 439

5. Advantages and Disadvantages of Various Samples 439

6. Summary 441

Exercises 442

Project 442

References 443

CHAPTER 16

FORMAL TESTS OF THE EXISTENCE OF A RELATIONSHIP 445

Objectives 446

Glossary 447

1. Testing for the Existence of a Relationship 448

2. Review of Sampling Distributions 448

3. The Decisions of Statistical Inference 452

4. Tests when Using Percentage Analysis 457

Defining the comparison population 458*Chi square: A calculation of difference* 459*Understanding and using a Chi-square table* 460*Making the comparison* 461*The decision of inference* 461*One-tailed and two-tailed tests* 464*Terminology* 464

5. Tests When Using Measures of Association 465

6. Levels of Significance: Useful or Meaningless 466

7. Summary 467

Exercises 468

Project 470

References 470

PART VI FINISHING TOUCHES 471

CHAPTER 17

READING AND EVALUATING RESEARCH PUBLICATIONS 473

Objectives 474

Glossary 475

1. Evaluating Research Publications 475

2. Procedures for Critiquing a Research Article 479

3. Illustration of Writing a Critique 480

Sample article 480*Notes on sample article* 492*Outline for sample critique* 494*Sample critique* 498

4. A Note on Style 500

5. Summary 500

Exercises 501

Project 501

References 501

CHAPTER 18

THE NEVER-ENDING PROCESS 503

xviii

Objectives 504

Glossary 505

1. What's It All About? 505

2. Luck, Imagination, and Hard Work 508

INDEX 511
