

# Contents

<b>1</b>	<b>Introduction and Mathematical Preliminaries</b>	<b>1</b>
1.1	Notation and Abbreviations . . . . .	1
1.2	Basic Set Operations . . . . .	3
1.3	Cardinality of Sets – Finite, Countable, and Uncountable Sets	6
1.4	Rings and Algebras of Sets . . . . .	9
<b>2</b>	<b>Linear Spaces, Metric Spaces, and Hilbert Spaces</b>	<b>11</b>
2.1	Linear Spaces . . . . .	11
2.1.1	Subspaces . . . . .	14
2.1.2	Factor spaces (quotient spaces) . . . . .	15
2.1.3	Linear functionals . . . . .	15
2.1.4	Null space (kernel) of a functional – hyperplanes . .	16
2.1.5	Geometric interpretation of linear functions . . . . .	16
2.1.6	Normed linear spaces . . . . .	17
2.2	Metric Spaces . . . . .	18
2.2.1	Continuous mappings . . . . .	18

2.2.2	Convergence . . . . .	19
2.2.3	Dense subsets . . . . .	20
2.2.4	Closed sets . . . . .	21
2.2.5	Open sets . . . . .	21
2.2.6	Complex metric spaces . . . . .	22
2.2.7	Completion of metric spaces . . . . .	22
2.2.8	Norm-induced metric and Banach spaces . . . . .	23
2.3	Euclidean Spaces . . . . .	23
2.3.1	Scalar products, orthogonality and bases . . . . .	23
2.3.2	Existence of an orthogonal basis . . . . .	25
2.3.3	Bessel's inequality and closed orthogonal systems . . . . .	26
2.3.4	Complete Euclidean spaces and the Riesz-Fischer theorem . . . . .	28
2.4	Hilbert Spaces . . . . .	29
2.4.1	Subspaces, orthogonal complements, and direct sums . . . . .	30
2.5	Characterization of Euclidean spaces . . . . .	33
<b>3</b>	<b>Integration</b> . . . . .	<b>37</b>
3.1	The Riemann Integral . . . . .	37
3.1.1	Upper and lower Riemann integrals . . . . .	38
3.1.2	Riemann integration vs Lebesgue integration . . . . .	41
3.2	The Lebesgue Measure on $\mathbb{R}$ . . . . .	42
3.3	Measurable Functions . . . . .	49

3.3.1	Simple functions . . . . .	55
3.4	Convergence of Measurable Functions . . . . .	56
3.5	Lebesgue Integration . . . . .	58
3.5.1	Some properties of the Lebesgue integral . . . . .	68
<b>4</b>	<b>Fourier Analysis</b>	<b>69</b>
4.1	The Spaces $L^1(\chi)$ and $L^2(\chi)$ . . . . .	70
4.1.1	The space $L^1(\chi)$ . . . . .	71
4.1.2	The space $L^2(\chi)$ . . . . .	72
4.2	Fourier Series . . . . .	79
4.2.1	Fourier series of square integrable functions . . . . .	80
4.2.2	Fourier series of absolutely integrable functions . . . . .	86
4.2.3	The convolution product on $L^1(S^1)$ . . . . .	89
4.3	Fourier Transforms . . . . .	90
4.3.1	Fourier transforms of functions in $L^2(\mathbf{R})$ . . . . .	96
4.3.2	Fourier transforms of functions in $L^1(\mathbf{R})$ . . . . .	96
4.3.3	Poisson summation formula . . . . .	99
<b>5</b>	<b>Wavelet Analysis</b>	<b>101</b>
5.1	Time-Frequency Analysis and the Windowed Fourier Transform . . . . .	101
5.1.1	Heisenberg's Uncertainty Principle . . . . .	103
5.2	The Integral Wavelet Transform . . . . .	105
5.3	The Discrete Wavelet Transform . . . . .	112

5.4	Multiresolution Analysis (MRA) of $L^2(\mathbf{R})$ . . . . .	116
5.4.1	Constructing an MRA from a scaling function . . . . .	124
5.5	Wavelet Decomposition and Reconstruction of Functions . . . . .	131
5.5.1	Multiresolution decomposition and reconstruction of functions in $L^2(\mathbf{R})$ . . . . .	131
5.6	The Fast Wavelet Algorithm . . . . .	136
<b>6</b>	<b>Construction of Wavelets</b> . . . . .	<b>141</b>
6.1	The Battle-Lemarié Family of Wavelets . . . . .	141
6.1.1	Cardinal B-splines . . . . .	142
6.1.2	Cardinal B-spline MRA of $L^2(\mathbf{R})$ . . . . .	144
6.2	Subband Filtering Schemes . . . . .	152
6.2.1	Bandlimited functions . . . . .	152
6.2.2	Discrete filtering . . . . .	154
6.2.3	Conjugate quadrature filters (CQF) . . . . .	158
6.2.4	CQFs arising from MRAs . . . . .	159
6.3	Compactly Supported Orthonormal Wavelet Bases . . . . .	160
6.3.1	The structure of $m_0$ . . . . .	160
6.3.2	Necessary and sufficient conditions for orthonormality . . . . .	166
6.3.3	The cascade algorithm . . . . .	174
6.4	Biorthogonal Wavelets . . . . .	178
6.4.1	Linear phase FIR filters . . . . .	178
6.4.2	Compactly supported orthonormal wavelets are asymmetric . . . . .	184

6.4.3	Dual FIR filters with exact reconstruction . . . . .	187
6.4.4	Dual scaling functions and wavelets . . . . .	191
6.4.5	Biorthogonal Riesz bases of wavelets and associated MRAs . . . . .	192
6.4.6	Conditions for biorthogonality . . . . .	193
6.4.7	Symmetry for $m_0$ and $\tilde{m}_0$ . . . . .	210
6.4.8	Biorthogonal spline wavelets with compact support . . . . .	211
<b>7</b>	<b>Wavelets in Image Processing</b>	<b>215</b>
7.1	The Burt-Adelson Pyramidal Decomposition Scheme . . . . .	217
7.1.1	The smoothing function $\mathbf{H}_\infty$ . . . . .	222
7.2	Mallat's Wavelet-Based Pyramidal Decomposition Scheme . . . . .	224
7.2.1	The one-dimensional fast wavelet algorithm . . . . .	225
7.2.2	An MRA of $L^2(\mathbf{R}^2)$ . . . . .	228
7.2.3	The two-dimensional wavelet algorithm . . . . .	230
7.3	Multiscale Edge Representation of Images . . . . .	235
7.3.1	The one-dimensional dyadic wavelet transform . . . . .	239
7.3.2	Signal reconstruction from its one-dimensional dyadic wavelet transform . . . . .	242
7.3.3	Method of alternate projections . . . . .	245
7.3.4	The dyadic wavelet transform of images . . . . .	247
7.3.5	Image reconstruction from its two-dimensional dyadic wavelet transform . . . . .	251
7.3.6	Method of alternate projections in two-dimensional . . . . .	254

7.3.7	The discrete finite dyadic wavelet transform . . . . .	256
7.4	Double-Layered Image encoding . . . . .	258
7.4.1	Multiscale edge-based image encoding . . . . .	259
7.4.2	Texture-based image encoding . . . . .	260
7.5	Additional Wavelet Applications . . . . .	261
<b>A</b>	<b>Bezout's Theorem</b>	<b>269</b>
