Heinz LANGER

Spectral functions of definitizable operators in Krein spaces	1
Introduction	1
I. Definitions and examples	3
I.1. Krein spaces	3
I.2. Typical situations	6
I.3. Some classes of linear operators	8
I.4. Examples	12
I.5. Orthogonality. Subspaces	18
II. Spectral functions of definitizable operators	22
II.1. Inverse formulas	22
II.2. A representation of the resolvent	25
II.3. Spectral functions	29
II.4. A characterization of the critical points	35
II.5. Further study of critical points	36
II.6. Nonnegative operators	42
II.7. Maximal nonnegative invariant subspaces	44

Svetozar KUREPA

Semigroups and cosine functions	47
Introduction	47
§ 1. Semigroups and cosine functions in Banach algebras	49
§ 2. Measurability and continuity	56
§ 3. Spectral representations for cosine functions	66

Dieter LUTZ

Strongly continuous operator cosine functions	73
1. Introduction	73
2. Basic facts on operator cosine functions and their generators	75
3. The linear second order Cauchy problem	85
4. Characterization of infinitesimal generators and perturbation theory	89
5. Spectral theory	93

Hrvoje KRALJEVIĆ

Rank and index in Banach algebras	98
Introduction	98
1. Some notions in classical operator theory	99
2. Finite rank elements in Banach algebras	103
3. Fredholm elements and index in Banach algebras	107
4. Semisimple Banach algebras	109
5. Refinement of the definition of index	115

Olga HADŽIĆ

Fixed point theorems in not necessarily locally convex topological vector spaces	118
Introduction	118
1. Fixed point theorems for single valued mapping in not necessarily locally convex topological vector spaces	119
2. Fixed point theorems for multivalued mappings in not necessarily locally convex topological vector spaces	125

Alain GUICHARDET

Introduction to Lie groups and their representations ..	131
I, Introduction: quantum mechanical operators, Galilean Lie algebra and Galilean Lie group,....	131
II, Lie groups and their Lie algebras	137
II.1, General definitions	137
II.2, Examples	138
II.3, The Lie algebra of a Lie group	139
II.4, The exponential mapping	40
II.5, Morphisms of Lie groups	141
III, Theory of group representations	145
III.1, General (= not necessarily unitary) representations	145
III.2, Unitary representations of topological groups	147
III.3, Irreducible representations of $SU(2)$ and $SO(3)$	150
III.4, Infinitesimal operators of unitary representations of Lie groups	152
IV, Induced representations, Application to the Galilean group	154
IV.1, Induced representations	154

IV.2, Application to semi-direct products	155
IV.3, Representations of the Galilean group ...	157
IV.4, Concluding remarks	161

Jørgen HOFFMANN-JØRGENSEN

Probability and geometry of Banach spaces	164
1. Introduction	164
2. Prerequisites	167
I, Random variables	167
II, Convergence in law	169
III, Measurable linear spaces	172
IV, Random vectors	174
V, Characteristic functionals	177
VI, Symmetrization	178
VII, Stochastic processes	180
3. Maximal inequalities	185
4. Sums of independent random variables	193
5. The law of large numbers	207
6. The central limit theorem	218
