

CONTENTS

<i>Preface</i>	v
<i>Sponsors, Organizing Committee, International Standing Committee</i>	vi
Part I	
Dynamical symmetries and symmetries of equations	
Twenty years of dynamical groups and spectrum generating algebras <i>A. Bohm and Y. Ne'eman</i>	3
Quantum invariants and state system generating algebra <i>V. I. Man'ko</i>	51
Dynamic symmetry in many-body problem <i>J. L. Birman and A. I. Solomon</i>	61
Transvector algebras in representation theory and dynamic symmetry <i>D. P. Zhelobenko</i>	71
The Galilei group in investigations of symmetry properties of Maxwell equations <i>G. A. Kotel'nikov</i>	95
Conformally invariant nonlinear equations of electromagnetic field <i>W. I. Fushchich and I. M. Zifra</i>	111
A nonassociative extension of the Dirac matrix algebra <i>J. Lohmus and L. Sorgsepp</i>	117
Part II	
Representation theory	
Canonical basis in irreducible representations of gl_3 and its applications <i>I. Gelfand and A. Zelevinsky</i>	127
Multiplicities and proper bases for gl_n <i>I. Gelfand and A. Zelevinsky</i>	147
On R-matrix quantization of formal loop groups <i>I. V. Cherednik</i>	161
Symmetric basis in Lie group representation theory and constructing Clebsch–Gordon coefficients <i>A. L. Shelepin and L. A. Shelepin</i>	181
Invariant algebraic methods and symmetric analysis of cooperative phenomena <i>V. P. Karassiov</i>	201
Multiplicative integrals of representations of PSU(1,1), SU(2) and vertex operators <i>Yi. A. Verdiev</i>	211
On structure of the representations of U(2, 1) with extremal vector <i>Yu. F. Smirnov, V. N. Tolstoy, V. A. Knyr and L. Ya. Stotland</i>	223
Recurrent constructing SU(4) supermultiplet basis <i>D. M. Vladimirov and Yu. V. Gaponov</i>	233

The elements of the SU(3) Wigner-Racah algebra <i>V. N. Tolstoy, Yu. F. Smirnov and Z. Pluhar</i>	243
Multiplicities of angular momenta for $N_1 \times N_2 \times N_3$ -dimensional oscillator and the reduction $SU(N) \supset O(3)$ <i>V. V. Mikhailov</i>	259
Casimir operators of the generalized Poincaré and Galilei groups <i>L. Barannik and W. Fushchich</i>	275
Part III	
Gauge theories	
Conformal invariance in quantum nonabelian gauge field theory <i>M. Ya. Palchik</i>	285
On topological properties of orbit space in gauge field theories <i>M. A. Soloviev</i>	297
String interaction from the path group approach <i>M. B. Mensky</i>	307
Large N-limit in U(N) one-plaquette models <i>S. I. Azakov</i>	319
Gauge model generated by non-P-even functions <i>L. M. Slad</i>	331
Higgs models resulting from symmetric spaces <i>Yu. A. Kubyshin and I. P. Volobujev</i>	343
Problem of Bose-condensation in gauge theories <i>E. Ferrer, V. P. de la Inera and A. E. Shabad</i>	355
Gauge invariant generalization of the Wigner function of quantum system in a nonuniform magnetic field <i>V. V. Dodonov, V. I. Man'ko and D. L. Ossipov</i>	363
Part IV	
Space groups and solid state physics	
(p, 2)-symmetry space groups <i>A. F. Palistrant</i>	377
Affine normalizers of space groups and the global search for optimal packings of a molecular crystal <i>A. V. Dzyabchenko</i>	387
Application of the permutation-inversion symmetry group to the analysis of orientational disorder in crystals <i>A. Koroliev and V. Smirnov</i>	397
Tensor symmetry of the macroscopic physical properties of two-sublattice magnetics <i>S. S. Gírgel</i>	403
The symmetry of group representations and the reduction of the multiplicity problem <i>R. Dirl, P. Kasperkovitz, J. N. Kotzev, M. I. Aroyo and M. N. Angelova</i>	409
Symmetry classification of multicomponent order parameters with regard to incommensurate phases <i>I. L. Kraizman, V. P. Sakhnenko and G. M. Chechin</i>	419
On the Wigner-Eckart theorem and coupled tensor operators for corepresentations of Shubnikov groups <i>M. N. Angelova, M. I. Aroyo and J. N. Kotzev</i>	433

Large unit cell—small Brillouin zone model in the oscillation problems of crystallophysics <i>V. A. Kopsisik and S. A. Ryabtchikov</i>	441
Superspace group approach to complicated crystal lattice dynamics <i>I. I. Nebola and N. R. Kharkhalis</i>	449
On the phenomenologic description of electronic phase transitions to incommensurate state <i>A. A. Gorbatsevich and Yu. V. Kopaev</i>	459
Applications of group theory to relativistic computing impurity ions in crystals <i>J. Brants</i>	471
New topological invariants of linked linear defects in condensed matter <i>M. I. Monastyrsky and V. S. Retakh</i>	477
Tensor field representation in the nuclear solid state physics <i>E. N. Ovchinnikova and R. N. Kuz'min</i>	491

Part V

Symmetries in optics, atomic, molecular, and nuclear physics

Group theoretical methods in Lie optics <i>K. B. Wolf</i>	501
Universal invariants of paraxial optical beams <i>V. V. Dodonov and O. V. Man'ko</i>	523
Correlated coherent states and wave propagation through optical active quadratic-index media <i>S. G. Krivoshlykov, N. I. Petrov and I. N. Sisakyan</i>	531
A matrix method for analysis of optical systems with aberrations and misalignments <i>V. P. Karassiov and Z. S. Sazonova</i>	539
On calculating Einstein coefficients for time-periodic systems. Integral of motion method <i>E. V. Ivanova</i>	549
Application of four- and five dimensional rotation groups to description of approximate symmetries of many-electron atoms <i>J. M. Kaniauskas, V. C. Simonis and Z. B. Rudzikas</i>	563
Calculations for two-photon ionization of atomic hydrogen above the photoelectric threshold by analytic continuation <i>E. Karule</i>	573
The threshold phenomena on three-particle Coulomb systems <i>M. K. Gailitis</i>	585
Symmetry and critical phenomena in rotational spectra of isolated microsystems <i>I. M. Pavlichenkov and B. I. Zhilinskii</i>	593
Structure and features of the constant non-abelian field Hamiltonians generated by Cartan algebras <i>V. Vanagas</i>	605
Low-lying levels of spherical nuclei, boson models and a new type of symmetry <i>O. Vorov and V. Zelevinsky</i>	613
Some group-theoretical aspects of symplectic collective model of heavy nuclei <i>Yu. F. Smirnov and R. M. Asherova</i>	627
Group theoretical approach to the three body problem <i>G. I. Kuznetsov</i>	639
SU(4)-symmetry in nuclear physics <i>D. M. Vladimirov and Yu. V. Gaponov</i>	651
