
CONTENTS

PREFACE	vii
1 INTRODUCTION	1
1.1 Vision: A mobile video communicator	1
1.2 Enabling factors	2
1.3 Technical issues to solve	7
1.4 VLSI design methodology for MPEG-4	11
2 MOTION ESTIMATION ALGORITHMS	17
2.1 Introduction	17
2.2 MPEG-4 motion estimation	18
2.3 Rate/Distortion-optimized motion estimation	25
2.4 Fast motion estimation algorithms: an overview	26
2.5 Summary	59
3 COMPLEXITY ANALYSIS METHODOLOGY	61
3.1 Motivation	61
3.2 Processor based complexity metrics	61
3.3 Methods for instruction level complexity analysis	70
3.4 A new tool and methodology for complexity analysis: iprof	81
3.5 Summary	92
4 COMPLEXITY ANALYSIS OF MPEG-4 VISUAL	93
4.1 Motivation	93
4.2 Introduction	94
4.3 MPEG-4 Encoder: Arbitrarily-Shaped Video Objects	97
4.4 MPEG-4 Decoder: Arbitrarily-Shaped Video Objects	101
4.5 Summary	105
5 ANALYSIS OF FAST MOTION ESTIMATION ALGORITHMS	107
5.1 Introduction	107
5.2 Analysis methodology	107
5.3 Fast motion estimation for MPEG-4	108

5.4 Results: PSNR/bit rate	110
5.5 Results: Complexity	114
5.6 Summary	116
6 DESIGN SPACE MOTION ESTIMATION ARCHITECTURES	119
6.1 Introduction	119
6.2 General design space evaluation	121
6.3 Design space motion estimation architectures	126
6.4 Motion estimation architectures for MPEG-4	147
6.5 Design trade-offs: Search Engine I (2D-Array)	167
6.6 Design trade-offs: Search Engine II (1D- Array)	168
6.7 Summary	174
7 VLSI IMPLEMENTATION: SEARCH ENGINE I	175
7.1 Introduction	175
7.2 Algorithm Architecture Mapping	175
7.3 VLSI architecture	180
7.4 Processor element array	181
7.5 Results	184
7.6 Comparison of the results with other implementations	185
7.7 Processor - flexible ASIC comparison with ATB metric	186
7.8 Summary	188
8 VLSI IMPLEMENTATION: SEARCH ENGINE II	189
8.1 Introduction	189
8.2 Architecture	189
8.3 Algorithm architecture mapping	194
8.4 Memory configurations	204
8.5 Results	206
8.6 Comparison with related work	208
8.7 Processor - flexible ASIC comparison with ATB metric	210
8.8 Summary	211
9 SUMMARY	213
ANNEX	217
BIBLIOGRAPHY	221
INDEX	237
