

Contents

Chapter 1. Introduction	1
Chapter 2. The finite dimensional Kobayashi-Hitchin correspondence	11
2.1. Analytic Stability, Symplectic stability	11
2.2. The Continuity Method in the finite dimensional case	15
2.3. Maximal weight functions for linear and projective actions	18
Chapter 3. A “universal” complex geometric classification problem	23
3.1. Oriented holomorphic pairs	23
3.2. The stability condition for universal oriented holomorphic pairs	24
Chapter 4. Hermitian-Einstein pairs	33
4.1. The Hermitian-Einstein equation	33
4.2. Pairs which allow Hermitian-Einstein reductions are polystable	34
Chapter 5. Polystable pairs allow Hermitian-Einstein reductions	39
5.1. The perturbed equation	39
5.2. A priori estimates for the solution s_ε	41
5.3. Solving the equation (e_ε) for $\varepsilon \in (0, 1]$.	42
5.4. Destabilizing the pair in the unbounded case	48
Chapter 6. Examples and Applications	57
6.1. Oriented holomorphic principal bundles and oriented connections	57
6.2. Moduli spaces of oriented pairs	64
6.3. Non-abelian monopoles on Gauduchon surfaces	70
Chapter 7. Appendix	77
7.1. Chern connections	77
7.2. Orbits of the adjoint action, sections in the adjoint bundle	80
7.3. Local maximal torus reductions of a K -bundle	84
7.4. Connection and maximal torus reductions	85
7.5. Analytic results	88
7.6. Weakly holomorphic parabolic reductions	89
Bibliography	95
