

Table of Contents

List of Nomenclature	XVII
1 Historical Background	1
1.1 The 17 th Century.....	1
1.2 The 18 th Century.....	4
1.3 The 19 th Century.....	6
1.4 The 20 th Century.....	15
2 Basic Concepts	25
2.1 Light Propagation Through Inhomogeneous Media.....	25
2.2 Definition of a Schliere	28
2.3 Distinction Between Schlieren and Shadowgraph Methods.....	29
2.4 Direct Shadowgraphy	30
2.5 Simple Lens-Type Schlieren System.....	32
2.5.1 Point Light Source.....	32
2.5.2 Extended Light Source.....	34
2.6 On the Aspect of a Schlieren Image.....	37
3 Toepler's Schlieren Technique	39
3.1 Lens- and Mirror-Type Systems.....	39
3.1.1 Lens Systems.....	40
3.1.2 Mirror Systems.....	42
3.2 Sensitivity.....	48
3.2.1 Definition and Geometrical Theory	48
3.2.2 Sensitivity Examples.....	52
3.2.3 The Limits of Sensitivity.....	54
3.2.4 Sensitivity Enhancement by Post-Processing.....	57
3.3 Measuring Range.....	60
3.3.1 Definition of Measuring Range.....	60
3.3.2 Adjustment of Measuring Range.....	61
3.4 Estimating the Sensitivity and Range Required	63
3.5 Resolving Power	65
3.6 Diffraction Effects.....	66
3.6.1 Diffraction Halos Due to Opaque Edges in the Test Area	66
3.6.2 Diffraction at the Knife-Edge.....	68

3.7 Magnification and Depth of Field	73
3.7.1 Image Magnification and the Focusing Lens	73
3.7.2 Depth of Field	74
4 Large-Field and Focusing Schlieren Methods	77
4.1 Large Single- and Double-Mirror Systems	77
4.1.1 Availability of Large Schlieren Mirrors	77
4.1.2 Examples of Large-Mirror Systems	78
4.1.3 Penn State's 1-Meter Coincident Schlieren System	79
4.2 Traditional Schlieren Systems with Large Light Sources	81
4.3 Lens-and-Grid Techniques	84
4.3.1 Simple Background Distortion	84
4.3.2 Background Grid Distortion	86
4.3.3 Large Colored Grid Background	87
4.3.4 The Modern Focusing/Large-Field Schlieren System	88
4.3.5 Penn State's Full-Scale Schlieren System	98
4.4 Large-Field Scanning Schlieren Systems	104
4.4.1 Scanning Schlieren Systems for Moving Objects	104
4.4.2 Schlieren Systems with Scanning Light Source and Cutoff	106
4.5 Moiré-Fringe Methods	108
4.6 Holographic and Tomographic Schlieren	109
5 Specialized Schlieren Techniques	111
5.1 Special Schlieren Cutoffs	111
5.1.1 Graded Filters	112
5.1.2 Exponential Cutoffs and Source Filters	115
5.1.3 Matched Spatial Filters at Source and Cutoff	116
5.1.4 Phase Contrast	119
5.1.5 Photochromic and Photorefractive Cutoffs	121
5.2 Color Schlieren Methods	122
5.2.1 Reasons for Introducing Color	122
5.2.2 Conversion from Monochrome to Color Schlieren	123
5.2.3 Classification of Color Schlieren Techniques	123
5.2.4 Recent Developments	128
5.3 Stereoscopic Schlieren	130
5.4 Schlieren Interferometry	132
5.4.1 The Wollaston-Prism Shearing (Differential) Interferometer	132
5.4.2 Diffraction-Based Schlieren Interferometers	134
5.5 Computer-Simulated Schlieren	136
5.6 Various Specialized Techniques	137
5.6.1 Resonant Refractivity and the Visualization of Sound	138
5.6.2 Anamorphic Schlieren Systems	138
5.6.3 Schlieren Observation of Tracers	138
5.6.4 Two-View Schlieren	140
5.6.5 Immersion Methods	140
5.6.6 Infrared Schlieren	141

6 Shadowgraph Techniques	143
6.1 Background.....	143
6.1.1 Historical Development.....	143
6.1.2 The Role of Shadowgraphy.....	144
6.1.3 Advantages and Limitations.....	145
6.2 Direct Shadowgraphy.....	147
6.2.1 Direct Shadowgraphy in Diverging Light.....	148
6.2.2 Direct Shadowgraphy in Parallel Light.....	152
6.3 “Focused” Shadowgraphy.....	155
6.3.1 Principle of Operation.....	155
6.3.2 History and Terminology.....	156
6.3.3 Advantages and Limitations.....	157
6.3.4 Magnification, Illuminance, and the Virtual Shadow Effect.....	158
6.3.5 “Focused” Shadowgraphy in Ballistic Ranges.....	158
6.4 Specialized Shadowgraph Techniques.....	159
6.4.1 Large-Scale Shadowgraphy.....	159
6.4.2 Microscopic, Stereoscopic, and Holographic Shadowgraphy.....	161
6.4.3 Computed Shadowgraphy.....	162
6.4.4 Conical Shadowgraphy.....	163
7 Practical Issues	165
7.1 Optical Components.....	165
7.1.1 Light Sources.....	165
7.1.2 Mirrors.....	170
7.1.3 Schlieren Cutoffs and Source Filters.....	171
7.1.4 Condensers and Source Slits.....	172
7.1.5 The Required Optical Quality.....	174
7.2 Equipment Fabrication, Alignment, and Operation.....	176
7.2.1 Schlieren System Design Using Ray Tracing Codes.....	176
7.2.2 Fabrication of Apparatus.....	177
7.2.3 Setup, Alignment, and Adjustment.....	178
7.2.4 Vibration and Mechanical Stability.....	181
7.2.5 Stray Light, Self-Luminous Events, and Secondary Images.....	183
7.2.6 Interference from Ambient Airflows.....	184
7.3 Capturing Schlieren Images and Shadowgrams.....	184
7.3.1 Photography and Cinematography.....	185
7.3.2 Videography.....	188
7.3.3 High-Speed imaging.....	189
7.3.4 Front-Lighting.....	193
7.4 Commercial and Portable Schlieren Instruments.....	195
7.4.1 Soviet Instruments.....	195
7.4.2 Western Instruments.....	198
7.4.3 Portable Schlieren Apparatus.....	198
8 Setting Up Your Own Simple Schlieren and Shadowgraph System	201
8.1 Designing the Schlieren System.....	201
8.2 Determining the Cost.....	203

8.3	Choosing a Setup Location.....	204
8.4	Aligning the Optics	205
8.5	Troubleshooting	206
8.6	Recording the Schlieren Image or Shadowgram	208
8.7	Conclusion.....	209
9	Applications	211
9.1	Phenomena in Solids	211
9.1.1	Glass Technology.....	211
9.1.2	Polymer-Film Characterization	213
9.1.3	Fracture Mechanics and Terminal Ballistics	214
9.1.4	Specular Reflection from Surfaces.....	215
9.2	Phenomena in Liquids	215
9.2.1	Convective Heat and Mass Transfer	215
9.2.2	Liquid Surface Waves	217
9.2.3	Liquid Atomization and Sprays.....	219
9.2.4	Ultrasonics.....	219
9.2.5	Water Tunnel Testing and Terminal Ballistics.....	220
9.3	Phenomena in Gases.....	221
9.3.1	Agricultural Airflows	221
9.3.2	Aero-Optics	222
9.3.3	Architectural Acoustics	223
9.3.4	Boundary Layers	224
9.3.5	Convective Heat and Mass Transfer	225
9.3.6	Heating, Ventilation, and Air-Conditioning.....	226
9.3.7	Gas Leak Detection	228
9.3.8	Electrical Breakdown and Discharge	229
9.3.9	Explosions, Blasts, Shock Waves, and Shock Tubes	230
9.3.10	Ballistics	231
9.3.11	Gas Dynamics and High-Speed Wind Tunnel Testing.....	233
9.3.12	Supersonic Jets and Jet Noise.....	235
9.3.13	Turbomachinery and Rotorcraft	236
9.4	Other Applications	237
9.4.1	Art and music	237
9.4.2	Biomedical Applications	240
9.4.3	Combustion	244
9.4.4	Geophysics	245
9.4.5	Industrial Applications	246
9.4.6	Materials Processing	247
9.4.7	Microscopy.....	249
9.4.8	Optical Processing.....	252
9.4.9	Optical Shop Testing.....	253
9.4.10	Outdoor Schlieren and Shadowgraphy.....	254
9.4.11	Plasma Dynamics	259
9.4.12	Television Light Valve Projection	260
9.4.13	Turbulence.....	261

10 Quantitative Evaluation	263
10.1 Quantitative Schlieren Evaluation by Photometry	264
10.1.1 Absolute Photometric Methods	265
10.1.2 Standard Photometric Methods	266
10.2 Grid-Cutoff Methods.....	268
10.2.1 Focal Grids.....	268
10.2.2 Defocused Grids.....	271
10.2.3 Defocused Filament Cutoff	272
10.3 Quantitative Image Velocimetry	273
10.3.1 Background	273
10.3.2 Multiple-Exposure Eddy and Shock Velocimetry.....	274
10.3.3 Schlieren Image Correlation Velocimetry.....	274
10.3.4 Focusing Schlieren Deflectometry	275
10.3.5 The Background-Oriented Schlieren System.....	276
10.4 Quantitative Shadowgraphy	277
10.4.1 Double Integration of $\partial^2 n/\partial y^2$	277
10.4.2 Turbulence Research	277
10.4.3 Shock-Wave Strength Quantitation.....	277
10.4.4 Grid Shadowgraphy Methods.....	277
11 Summary and Outlook	279
11.1 Summary	279
11.1.1 Perceptions Outside the Scientific Community.....	279
11.1.2 Other Lessons Learned.....	280
11.1.3 Further Comments on Historical Development.....	281
11.1.4 Further Comments on Images and Visualization	281
11.1.5 Renewed Vitality.....	283
11.2 Outlook: Issues for the Future.....	284
11.2.1 Predictions.....	284
11.2.2 Opportunities.....	286
11.2.3 Recommendations	288
11.3 Closing Remarks	289
References	291
Appendix A Optical Fundamentals	333
A.1 Radiometry and Photometry.....	333
A.2 Refraction Angle ϵ	334
A.2.1 Small Optical Angles and Paraxial Space	334
A.2.2 Huygens' Principle and Refraction	334
A.3 Optical Components and Devices.....	335
A.3.1 Conjugate Optical Planes	335
A.3.2 Lens f /number	335
A.3.3 The Thin-Lens Approximation.....	335
A.3.4 Viewing Screens and Ground Glass.....	336
A.3.5 Optical Density.....	336
A.4 Optical Aberrations	336

A.5 Light and the Human Eye.....	337
A.6 Geometric Theory of Light Refraction by a Schliere	338
Appendix B The Schlieren System as a Fourier Optical Processor	341
B.1 The Basic Fourier Processor with no Schlieren Present	341
B.2 The Addition of a Schlieren Test Object	344
B.3 The Schlieren Cutoff.....	345
B.4 Other Spatial Filters	347
B.5 Partially-Coherent and Polychromatic Illumination	350
Appendix C Parts List for a Simple Schlieren/ Shadowgraph System	353
C.1 Optics.....	353
C.2 Illumination.....	354
C.3 Miscellaneous Components	354
C.4 Optical Mounts	354
Appendix D Suppliers of Schlieren Systems and Components.....	355
D.1 Complete Schlieren Systems	355
D.2 Schlieren Field Mirrors.....	356
D.3 Light Sources.....	357
D.4 Optical Components	358
D.5 Focusing Schlieren Lenses	358
D.6 High-Speed Cameras	359
D.7 Miscellaneous.....	359
Index	361
Color Plates	367
