

CONTENTS

Preface	v
Contributors	vii
<i>I ELECTROMAGNETICS</i>	1
Numerical Study of Secondary Flow Interaction in an Electrostatic Precipitator	3
T. Yamamoto, S. Nakamura, and H. R. Velkoff	
Theory of Magnetic Circuits for Nonlinear Magnetic Fields in Electromagnetic Devices	13
Y. Saito	
Dynamique des Systèmes de Conducteurs Elastiquement Couplés: Application à un Câble au SF6	23
A. Bossavit	
<i>II DIFFUSION</i>	33
Calcul des Structures en Thermique Transitoire par la Méthode des Equations Intégrales	35
M. Dubois and M. Buysse	
A Boundary Integration Method Applied to Three-Dimensional Darcy's Flow	47
G. P. Lennon, P. L-F. Liu, and J. A. Liggett	
<i>III FLUID-STRUCTURE INTERACTION</i>	57
The Application of Retarded Potential Techniques to Submerged Dynamic Structural Systems	59
Y. P. Lu	
Acoustic Radiation for Three-Dimensional Elastic Structures	69
I. Mathews and D. Hitchings	
Top-Down Derivation of Doubly Asymptotic Approximations for Structure-Fluid Interaction Analysis	79
C. A. Felippa	
A Boundary Integral Method for Highly Transient Internal Flow Problems Coupled with Structural Dynamics	89
R. Krieg, B. Dolensky, B. Goller, and G. Hailfinger	
Symmetric Boundary Integral Equation Method Applied to the Hydrodynamic Diffraction Radiation Problem	99
C. Berhault	
Hydroelastic Vibrations of Tanks: Added-Mass Computation with an Integral Equation Method	107
Y. Ousset	
Diffraction d'une Onde Acoustique par un Solide de Révolution Inhomogène Plongé dans un Fluide	119
G. Vanderborck and C. Rumelhard	

IV FLUIDS	129
Review of Integral-Equation Techniques for Solving Potential-Flow Problems with Complicated Boundaries J. L. Hess	131
Finite Element Techniques in Convection and/or Turbulence Dominated Transport A. J. Baker	145
Numerical Simulation of Coastal Upwelling off the Coast of Peru G. W. Heburn and J. J. O'Brien	157
On the Design of Modern Airfoil Sections by Numerical Methods D. J. Jones and B. Eggleston	169
Boundary Integral Equation Method Applied to Free Surface Flow Problems P. L-F. Liu	179
Triple-Deck Analysis for Flow over Obstacles: Application to Internal Hydraulic Pumps T. S. Murty and M. C. Rasmussen	189
Accommodation of Diverse Length Scales in General Viscous Flows J. C. Wu	201
Application of the Galerkin Method in the Analysis of Combustion Instability Problems B. T. Zinn and E. A. Powell	213
A Technique for High Accuracy of Discretizing Spatial Derivatives H. N. Lee	223
Etude d'Écoulements Multiflux par Juxtaposition de Processus Numériques Différents J. M. Hardy and L. Dutouquet	227
A Computer Code for the Calculation of Aircraft Trailing Vortices G. J. St-Cyr	239
A Symmetric Second Order Accurate Implicit Scheme for Convection-Diffusion Problems A. Lin and S. G. Rubin	251
Application of a Hybrid Numerical Method to Atmospheric Transport Problems D-K. Yang and G. R. Carmichael	261
An Arithmetic Computer Approach to Gas Dynamical Modeling A. R. Wadia and D. Greenspan	267
Recent Developments in Numerical Methods for Fluid Dynamics M. M. Gupta	277
A Finite Element with Upstream Differencing for the Navier-Stokes Equations D. Pelletier and R. Camarero	287
An Efficient Method for the Numerical Simulation of Linearized Free Surface Flows A. Jami and M. Lenoir	295
Mobile Finite Elements for Solving Moving Boundary Problems in Fluids T. C. Gopalakrishnan and C. C. Tung	303
Cubic Spline Technique for Navier-Stokes Equations B. L. Lohar and P. C. Jain	313
A Time Marching Finite Volume Method for Blade-to-Blade Flows Using a Body-Fitted Curvilinear Mesh M. E. Younis and R. Camarero	321

V SOLID MECHANICS

	329
Numerical Solutions in Axisymmetric Elastoplasticity by the Boundary Element Method D. N. Cathie and P. K. Banerjee	331
Les Equations Intégrales de Frontière: Outil d'Analyse Mécanique de Pièces Industrielles A. Chaudouet	341
Remarks on the Choice and on the Numerical Treatment of Integral Equations for Plane Elastostatics U. Heise	351
Applications of the Boundary Element Method in Time- Dependent Inelastic Deformation S. Mukherjee	361
A Boundary Integral Equation Method for Torsion of Variable Diameter Circular Shafts and Related Problems F. J. Rizzo, A. K. Gupta, and Y. Wu	373
A Direct Finite Element Approach to Elastoplastic Problems of the Mixed Type J. L. Swedlow and Y. K. Lee	381
A Novel Formulation and Solution of the Plane Elastostatic Displacement Problem G. T. Symm and P. K. Bhattacharyya	395
Hermitian Cubic Boundary Elements for Plane Elastostatics J. O. Watson	403
Doubly-Asymptotic, Boundary-Element Analysis of Nonlinear Soil-Structure Interaction P. Underwood and T. L. Geers	413
A Boundary Integral Equation Method for Axisymmetric Elastostatic Bodies under Arbitrary Surface Loads D. J. Shippy, F. J. Rizzo, and R. K. Nigam	423
Variable Domain Finite Elements for Some Stefan-Type Problems of Mechanics E. Varoğlu and W. D. L. Finn	433
Simulation Numérique du Comportement d'un Matériau Explosif par des Modèles Rhéologiques Linéaire et Non Linéaire R. Belmas, J. Reynaud, and J. Sorel	443
Viscoelastic Cylindrical Waves J. L. Sackman	451
Dynamic Stress Concentration Studies by the Boundary Integral Equations Method G. D. Manolis and D. E. Beskos	459
A General Numerical Method for the Solution of Transient Multidimensional Problems of Elasticity Theory for Inhomogeneous Media A. S. Alekseev and B. G. Mikhailenko	465
Impedance of Foundations Using the Boundary Integral Equation Method E. Alarcon and J. Dominguez	473
Numerical Techniques for the Efficient Transient Response of Structural Members J. S. Strenkowski and W. D. Pilkey	485
A Simple Boundary Element Approach to the Prediction of the Soil-Track Structure Interaction Problem C. S. Chang	491

VI MATHEMATICS	499
Phase Field Methods for Free Boundary Value Problems G. J. Fix	501
Finite Element Solution of Transposed Boundary Value Problems M. Fortin	509
Formulations Variationnelles de Quelques Equations Intégrales Faisant Intervenir des Parties Finies J. C. Nédélec	517
Staggered Time Marching Schemes in Dynamic Soil Analysis and a Selective Explicit Extrapolation Algorithm O. C. Zienkiewicz, E. Hinton, K. H. Leung, and R. L. Taylor	525
Approximations and Short Cuts Based on Generalized Functions R. P. Kanwal	531
Boundary Integral Method for Mixed Boundary Value Problems W. L. Wendland and E. Stephan	543
Direct Finite Difference Method I. Ohnaka	555
A Type-Independent Numerical Method for Solving Systems of Nonlinear Partial Differential Equations J. W. Neuberger	567
Application des Splines à une Méthode Variationnelle de Résolution d'un Système d'Equations Différentielles aux Valeurs Initiales Y. Allouard	575
A Hybrid Variable Penalty Method for Structural Optimization B. Prasad	583
Numerical Operational Methods for Time-Dependent Linear Problems D. E. Beskos	597
Résolution par Equations Intégrales de Problèmes aux Limites Extérieurs pour L'Equation de Helmholtz J. Giroire	607
Convergence of Some Integral Formulations N. Sayhi, Y. Ousset, and G. Verchery	613
An Efficient Method for Algorithmization of Boundary Problem Solutions and Its Application in Elastoplastic Analysis V. N. Sidorov and S. I. Trushin	625
High-Order Time-Stepping Methods for Nonlinear Evolution Equations J. E. Pasciak	633
A New Operational Approach to the Numerical Solution of Differential Equations in Terms of Polynomials E. L. Ortiz and H. Samara	643
VII STRUCTURES	653
Application of the Boundary Element Method to Shear and Torsion Problems in Elastic Prismatic Members E. Sauer and G. Mehlhorn	655

STRUCTURES (cont.)

The Solution of Variable-Step Implicit Difference Equations for Dynamic Systems Analysis K. C. Park	667
Application of the Summed Progressing Wave Formalism to Transient Problems In Structures D. A. Gamby	673
Dynamic Simulation of the Motion of a Flexible Mass-Transit Vehicle Traversing a Multispan Flexible Guideway G. E. Weeks and T. L. Cost	679
Analyse de Réseaux de Flexibles B. Pria and J. Grimoud	689
Three-Dimensional Limit Load Analysis of Reinforced Concrete Shells of Arbitrary Shape J. H. Coenen	701
A New Approach to Elastic Analysis of Multiply Connected Thick Plates and Thin Shallow Shells C. P. Vendhan, W. A. Nash, J. P. Cash, C. Chen, and D. S. Royce	711
Computation of Eigenfrequencies of Repetitive Structures J. Planchard	717
Three-Dimensional Finite Elements for Plate Models P. Destuynder	725
The Initial Boundary Value Problem of Gun Dynamics Solved by Finite Element Unconstrained Variational Formulations J. J. Wu	733
Two-State Rayleigh-Ritz Technique for Nonlinear Analysis of Structures A. K. Noor, J. M. Peters, and C. M. Anderson	743
The Method of Characteristics Applied to the Analysis of the BWR Safety Relief Valve Discharge L. M. Polizzi and R. J. Kwik	755
FRACTURE	767
Validité d'un Paramètre de Rupture Tridimensionnel Estimé par les Méthodes Equations Intégrales et Eléments Finis J. M. Boissenot, G. Loubignac, and D. Serres	769
The Calculation of Stress Intensity Factors in Plate Flexure M. Stern and J-W. Kim	777
Boundary Integral Equation Stress Analysis of Some Problems in High Pressure Engineering C. L. Tan and R. T. Fenner	787
Virtual Crack Variation Method for Determination of Stress Intensity Factors for Cracks of Mixed Mode and Variable Length V. A. Vainshtok	797
Applying Singular Elements in an Adaptive Refinement of a Finite Element Idealization O. Ohtmer	805
INDEX	809
