

## C O N T E N T S

R. Hermann	Fiber spaces, connections and Yang-Mills fields . . . . .	1
Th. Friedrich	A geometric introduction to Yang-Mills-equations . . . . .	74
F.A. Bais	Symmetry as a clue to the physics of elementary particles . . . . .	85
F.A. Bais	Topological excitations in gauge theories; an introduction from the physical point of view . . . . .	107
P.J.M. Bongaarts	Particles, fields and quantum theory . . . . .	143
E.F. Corrigan	Monopole solitons . . . . .	160
A. Trautman	Yang-Mills theory and Gravitation: A comparison . . . . .	179
M.G. Eastwood	The twistor description of linear fields . . . . .	190
R.S. Ward	Twistor techniques in gauge theories . . . . .	199
P. Molino	Simple pseudopotentials for the KdV-equation . . . . .	206
