

CONTENTS

Preface		iii
Invited Experts and Participants		v
Lecture Programme		vii
An Introduction to the Numerical Treatment of Volterra and Abel-Type Integral Equations	C.T.H. Baker	1
1. Orientation		1
2. Classification and Theory		3
3. Discretization Methods		7
4. Product Integration etc.		19
5. Theory and Extensions		22
6. References		36
Topics in Multivariate Approximation Theory	C. de Boor	39
Outline		39
1. Approximation Theory		40
2. Linear Interpolation		46
3. The Tensor Product Construct		50
4. Multivariate Polynomial Interpolation		55
5. Multivariate B-splines		63
6. Approximation from the Span of Multivariate B-splines		68
7. Epilogue		74
References		76
Practical Spline Approximation	M.G. Cox	79
Abstract and Scope		79
I. Polynomial Splines and B-spline Representation		80
II. Spline Interpolation and Least Squares Spline Approximation		95
References		111
Finite Element Methods for Non-self-adjoint Problems	K.W. Morton	113
1. Introduction		113
2. Variational Formulation and Approximation		119
3. Petrov-Galerkin Methods using Exponential, Upwinding and Stream- line Diffusion Techniques		129
4. Approximate Symmetrization and Optimal Approximation		136
References		146

An Introduction to Piecewise-linear Homotopy Algorithms for Solving Systems of Equations	M.J. Todd	149
1. Introduction		149
2. Problems		156
3. Triangulations and Piecewise-linear Approximations		159
4. Early Algorithms		162
5. Homotopies		166
6. Restart and Continuous Deformation Algorithms		171
7. Triangulations		178
8. An Artificial Cube Algorithm		183
9. Acceleration		187
10. Exploiting Special Structure		192
11. Remarks on Computational Experience		196
References		197
