

CONTENTS:

I. GENERAL THEORY

M. ARATO: Radon-Nikodym derivatives in case of rational spectral densities	2
A. AL-HUSSAINI: Differentiation of measures related to stochastic processes	16
M. ALARIO-NAZARET, J.P. LEPELTIER, B. MARCHAL: Dynkin games	23
J.M. BISMUT: An introduction to the stochastic calculus of variations	33
M.P. ERSHOV, K. GOOBEN: On one-dimensional Markov stochastic differential equations	73
A. FRIEDMAN: Some problems in sequential analysis	85
J. GRÖH: A stochastic differential equation for Feller's one dimensional diffusions	94
K. HELMES: A result of the iterated logarithm type for a certain class of stochastic processes	102
H.J. KUSHNER: Approximation of large deviations estimates and escape times and applications to systems with small noise effects	109
A.V. MELNIKOV: On strong solutions of stochastic equations with respect to semimartingales	122
M.A. PINSKY: Inverse problems in stochastic Riemannian geometry	128
E. WONG, M. ZAKAI: Some results on likelihood ratios for two parameter processes	135
J.ZABCZYK: Controllability of stochastic systems	144

II. <u>FILTER THEORY</u>	155
V.E. BENES ^y : Solving the Zakai equation by Itô's method	156
B.Z. BOBOWSKY, H.P. GEERING: Simple and efficient linear and nonlinear filters by regular perturbation methods	162
R.J. ELLIOTT: The nonlinear filtering equations	168
G.B. DI MASI, W.J. RUNGALDIER: On robust approximations in nonlinear filtering	179
E. PARDOUX: Smoothing of a diffusion process conditioned at final time	187
Z. SCHUSS: First passage times in stochastic models of physical systems in filtering theory	197
J.H. VAN SCHUPPEN: Adaptive stochastic filtering problems - the continuous time case	205
AN EDITOR'S NOTE	212
III. <u>STOCHASTIC CONTROL THEORY</u>	215
A. BENSOUSSAN: On perturbation methods in stochastic control	216
R. BOEL, M. KOHLMANN: A control problem in a manifold with nonsmooth boundary	229
N. CHRISTOPEIT, M. KOHLMANN: Some recent results on the control of partially observable stochastic systems	251
N.J. CUTLAND: Optimal controls for partially observed stochastic systems using nonstandard analysis	276
M.H.A. DAVIS: Stochastic control with tracking of exogenous parameters	285

N. EL-KAROUI, J.P. LEPELTIER, B. MARCHAL: Nisio semigroup associated to the control of Markov processes	294
U.G. HAUSSMANN: Optimal control of partially observed diffusions via the separation principle	302
I. KARATZAS: A class of singular stochastic control problems	312
G. MAZZIOTTO: Sur l'arrêt optimal de processus à deux indices réels	320
S.R. PLISKA: Duality theory for some stochastic control models	329
H. PRAGARAUSKAS: On the control of jump processes	338
R. RISHEL: A partially observed inventory problem	345
L. STETTNER: On impulsive control with long run average cost criterion	354
J. SZPIRGLAS: Separation theorem for optimal impulsive control with discontinuous observations	361
D. VERMES: Optimal control based on observations on the boundary	369
