E.H. BAREISS, Least squares solution of weighted linear systems by G-Transformations	1
C.A. BREBBIA, A new development in computational engineering	16
B. CHEN CHARPENTIER, A method for solving nonlinear parabolic equations with moving boundaries	37
Q.V. DINH, B. MANTEL, J. PERIAUX, and R. GLOWINSKI, Approximate solutions of the Navier-Stokes equations for incompressible viscous fluids. Related domain decomposition methods	46
I. DUFF, A multifrontal approach for solving sparse linear equations	87
S.C. EISENSTAT, Some observations on the generalized conjugate gradient method	99
J.P. FINK and W.C. RHEINBOLDT, Some analytic techniques for parametrized nonlinear equations and their discretizations	108
C.W. GEAR and L.R. PETZOLD, Singular implicit ordinary differential equations and constraints	120
B. GUSTAFSSON, Stability analysis for initial-boundary value problems	128
R.B. KEARFOTT, Continuation methods and parametrized nonlinear least squares: Techniques and experiments	142
D.R. KINCAID and T.C. OPPE, ITPACK on supercomputers	151
M. LENTINI and A. REINOZA, Piecewise nonlinear homotopies	162
G. MIRANDA and H. POWER, Integral equation solution of Oseen's flow with a free surface	170
C.A. DE MOURA, A linear uncoupling numerical scheme for the nonlinear coupled thermoelastodynamics equations	204
J. NOCEDAL and M.L. OVERTON, Numerical methods for solving inverse eigenvalue problems	212
G. PAGALLO and C. MAULINO, A bipartite quotient graph model for unsymmetric matrices	227
S.M. ROBINSON, Local structure of feasible sets in nonlinear programming, Part I: Regularity	240
R.T. ROCKAFELLAR and R.J.-B. WETS, A dual solution procedure for quadratic stochastic programs with simple recourse	252
L. RUIZ, Etude numérique d'un problème d'élasticité nonlinéaire	266
R. SCHREIBER, Systolic arrays for eigenvalues	284
