

# Contents

## I. A Modern Approach to the Design and Analysis of Experiments Suitable for the Computer Age

Randomization By ROSEMARY A.BAILEY, Harpenden .....	9
Block Designs By JOHN A.JOHN, Southampton .....	27
Optimal Designs for Linear Regression By FRIEDRICH PUKELSHEIM, Freiburg .....	32

## II. Recent Developments in Sample Survey Theory

Selection of Sample Survey Procedures based on the Minimax Principle By HORST STENGER, Mannheim .....	40
Foundations of Survey Sampling Inference By ROGER A. SUGDEN, London .....	48
Sampling of Cross-Sectional Time Series By HANS-J. LENZ, Berlin und PETER M.ROBINSON, Surrey .....	56

## III. Application of the Theory of Inference

The Usefulness of Measures of Efficiency for Rank Tests By GUNTER ROTHE, Dortmund .....	69
Sequential Tests for Stochastic Processes By NORBERT SCHMITZ, Münster .....	79

## IV. Modelling and Analysis of Point Processes

Bivariate Cox Processes: Some Models for Bivariate Spatial Point Patterns (Abstract) By PETER DIGGLE, Newcastle and ROBIN MILNE, Western Australia	87
Point Processes and the Markov Property By VALERIE ISHAM, London .....	88
On Moments of Point Processes By WERNER FIEGER, Karlsruhe .....	100

V. Formulation of Models and Inference for Linear  
and Nonlinear Time Series

The Parametrization of ARMA Systems By MANFRED DEISTLER, Vienna .....	110
The Search for Structure in Time Series: Progress with Multivariate, Nonlinear and Time-varying Models By GRANVILLE TUNICLIFFE WILSON, Lancaster .....	113
Recent Developments in Three Areas of Time Series Modelling By ANTHONY J. LAWRENCE, Birmingham .....	125
Limit Theorems for Autocovariances and Fourier Coefficients By EDWARD J. HANNAN, Canberra .....	132
