

## CONTENTS

<i>Preface</i> .....	vii
<i>Introduction: Theory and Applications of Spectral Methods</i> <i>David Gottlieb, M. Yousuff Hussaini and Steven A. Orszag</i>	1
<i>Variational Methods in the Theoretical Analysis of Spectral Approximations</i> <i>Claudio Canuto and Alfio Quarteroni</i>	55
<i>Spectral Methods for Two-Dimensional Shocks</i> <i>David Gottlieb, Liviu Lustman and Craig Streett</i>	79
<i>Eddy Resolving Modeling of Ocean Circulation Processes Using Spectral Methods</i> <i>D. B. Haidvogel</i>	97
<i>Iterative Spectral Methods and Spectral Solutions to Compressible Flows</i> <i>M. Yousuff Hussaini and Thomas A. Zang</i>	119
<i>Spectral Simulations of the Laminar-Turbulent Transition Process in Plane Poiseuille Flow</i> .....	<i>L. Kleiser and U. Schumann</i> 141
<i>Applications of Spectral Methods to Turbulent Magnetofluids in Space and Fusion Research</i> .....	<i>David Montgomery</i> 165
<i>Inhomogeneous Flow Calculations by Spectral Methods: Mono-Domain and Multi-Domain Techniques</i> .....	<i>Y. Morchoisne</i> 181
<i>Smoothing for Spectral Methods</i> .....	<i>Stanley Osher</i> 209
<i>Spectral Methods for Atmospheric Laser Calculations</i> .....	<i>Joseph E. Pasciak</i> 217
<i>Spectral Methods for Spatially Evolving Hydrodynamic Flows</i> .....	<i>A. T. Patera</i> 239
<i>Recent Advances in Pseudo-Spectral Methods</i> .....	<i>T. D. Taylor</i> 257
