Anniversary Commemorations	7
Preface	9
Zur Tagung	15
List of Participants	17
Program of the Sessions	21
Bl. Sendov: To Academician L. Iliev on the occasion of his 70th anniversary	25
R. Phillips: Recollections	29
P.R. Halmos: Béla Szőkefalvi-Nagy	35
J. Korevaar: Adriaan Cornelis Zaanen	41
I. Operator Theory	
P.R. Halmos: Subnormal suboperators and the subdiscrete topology	49
J.J. Grobler: Spectral properties of positive operators	67
C.R. Putnam: Positive commuting perturbations of selfadjoint operators and hypornormality	73
L. Zsidó: The resolvent of generalized self-adjoint operators and a related growth problem	77
L. Kérchy: Subspace lattices connected with C_{11} -contractions	89
D. Gaşpar, N. Suciuc: On the Wold decomposition of isometric semigroups	99
H. Berens, L. Hetzelt: On maximally accretive operators in the plane	109
II. Functional Analysis	
J. Peetre: Invariant function spaces connected with the holomorphic discrete series ..	119
F.L. Gilfeather: Derivations on certain CSL algebras II	135
C.B. Huijsmans: Ideals in $C(X)$	141
T.H. Koornwinder, J.J. Lodder: Generalised functions as linear functionals on generalized functions	151
J. Musielak: Some embedding theorems for modular classes	165
C. Bennett: Nontangential maximal functions and bounded lower oscillation	173
III. Abstract Approximation	
R.J. Nessel, E. van Wickeren: Negative results in connection with Favard's problem on the comparison of approximation processes	189
W. Dickmeis: A remark on quantitative gliding hump methods	201
R.C. Sharpley: Interpolation of H^1 and H^∞	207

R.A. DeVore, R.C. Sharpley, S.D. Riemenschneider: n -widths for C_p^α spaces	213
R.A. DeVore: The n -width of $BV \cap \text{Lip } \alpha$	223

IV. Approximation in Real Domains

V. Totik: The necessity of a new kind of modulus of smoothness	233
K.G. Ivanov: Approximation of functions of two variables by algebraic polynomials, I	249
J. Szabados: Polynomial approximation on disjoint intervals	257
F. Peherstorfer: Extremalpolynome in der L^1 - und L^2 -Norm auf zwei disjunkten Intervallen	269
M. v. Golitschek: Shortest path algorithms for the approximation by nomographic functions	281
E.L. Stark: A bibliography of the Bernstein power series operators of Meyer-König and Zeller and their generalizations	303

V. Functions of a Complex Variable and Approximation

W.K. Hayman, D. Kershaw, T.J. Lyons: The best harmonic approximant to a continuous function	317
J. Rovnyak: Optimal approximants and Szegő's infimum	329
H.S. Shapiro: Domains allowing exact quadrature identities for harmonic functions – an approach based on P.D.E.	335
R. Gervais-O.I. Rahman-G. Schmeisser: A bandlimited function simulating a duration-limited one	355
P.L. Butzer-S. Ries-R.L. Stens: Shannon's sampling theorem, Cauchy's integral formula, and related results	363

VI. Interpolation

P. Vértesi: Recent results on the almost everywhere divergence of Lagrange interpolation	381
R.B. Saxena-H.C. Tripathi: Uniform convergence of some poised problems of Hermite-Birkhoff interpolation	393
A. Jakimovski-D.C. Russell-M. Stieglitz: Spline interpolation of power-dominated data	403

VII. Orthogonal Functions and Harmonic Analysis

P. Nevai: Two of my favorite ways of obtaining asymptotics for orthogonal polynomials	417
W.C. Connett-A.L. Schwartz: Convolution structures for eigenfunction expansions arising from regular Sturm-Liouville problems	437
C. Market: Product formulas for Bessel, Whittaker, and Jacobi functions via the solution of an associated Cauchy problem	449
P. Masani: An outline of the Fourier transformation as integration with respect to a vector measure	463
W. Schempp: Radar ambiguity functions and the linear Schrödinger representation	481

VIII. Differential and Difference Equations

J.W. Jerome: Fixed point and implicit function theorems and their applications	495
K. Gustafson: Graph theory in the approximation theory of fluid dynamics	511
R. Phillips: The spectrum of the Laplacian for domains in hyperbolic space and limit sets of Kleinian groups	521
G. Lumer: An exponential formula of Hille-Yosida type for propagators	527
D.H. Mugler: Green's functions for the finite difference heat, Laplace and wave equations	543

IX. Probability Theory and Miscellaneous Topics

P. Révész: Estimation of the regression function via orthogonal expansion	557
P.L. Butzer-D. Schulz: The weak invariance principle with rates for $C[0, 1]$ -valued random-functions	567
M. de Guzmán: Proof of a conjecture by L.A. Santaló	585

X. New and Unsolved Problems 595

Alphabetical List of Papers	626
Mathematics Subject Classification Numbers	629
Key Words and Phrases	633
