

TABLE OF CONTENTS

M.KARPINSKI, J. VAN LEEUWEN	
Preface	v
B. v.BRAUNMUEHL, R. VERBEEK, Input-driven Languages are recognized in $\log n$ space	1
R.L. CONSTABLE, Constructive mathematics as a programming logic I: Some principles of theory	21
R. FREIVALDS, Space and reversal complexity of probabilistic one-way Turing machines	39
D. HAREL, Recurring dominoes: Making the highly undecidable highly understandable	51
H. LANGMAACK, A new transformational approach to partial correctness proof calculi for algol 68-like programs with finite modes and simple sideeffects	73
A. MACINTYRE, Effective determination of the zeros of p-ADIC exponential functions	103
R. PARIKH, The logic of games and its applications	111
E. SHAMIR, E. UPFAL, A fast parallel construction of disjoint paths in networks	141
P. TRUM, D. WOTSCHKE, Descriptive complexity for classes of Ianov-schemes	155
Author Index	187
