

CONTENTS

R. AZENCOTT, H. DOSS	- L'equation de Schrödinger $\hbar$ tend vers zero; une approche probabiliste .....	1
A. BADRIKIAN	- Rearrangement Gaussien de fonctions .....	19
F. BENTOSELA	- Electrons of a solid in an external electric field..	32
J. BERTRAND, G. RIDEAU-	An intrinsic approach to the evolution of quantum observables in terms of stochastic processes on phase space .....	39
D. DÜRR	- Diffusions and central limit theorems .....	55
W. KIRSCH	- Random Schrödinger operators and the density of states .....	68
Y. LEVY	- Ergodic properties of the Lozi map .....	103
R. LIMA	- Proprietes spectrales pour des Hamiltonians presque-periodiques .....	117
P. MOUSSA, D. BESSIS	- A solvable almost periodic Schrödinger operator ...	136
P. PICCO	- On the absence of breakdown of symmetry for the plane rotator model with long range unbounded random interaction .....	148
W. von WALDENFELS	- Stratonovich solution of a quantum stochastic differential equation describing light emission and absorption .....	155
V. WIHSTUTZ	- Analytic expansion of Lyapunov exponents associated to the Schrödinger operator .....	177
S. ALBEVERIO, Ph. BLANCHARD, R. HØEGH-KROHN	- Reduction of non linear problems to Schrödinger or heat equations: Formation of Kepler orbits, singular solutions for hydrodynamical equations .....	189
S. ALBEVERIO, Ph. BLANCHARD, F. GESZTESY, L. STREIT	- Quantum mechanical low energy scattering in terms of diffusion processes .....	207
