

CONTENTS

Preface

Opening Lecture

Basic Principles

C.A. Brebbia, University of Southampton & Computational Mechanics Centre, Southampton

3

SESSION I MATHEMATICAL PRINCIPLES

Boundary Elements and the Method of Moments

*R.F. Harrington, Syracuse University and
T.K. Sarkar, Rochester Institute of Technology, USA*

31

The Approximation of the Boundary Values in the BEM

W. Cecot, J. Orkisz, Technical University of Cracow

41

On Fundamental Solutions Applicable to BEM or BIM
for 3D Elastic Problems

I. Shimada, H. Okamura & K. Snoda, Toyo-Giken Consultants Co Ltd., Osaka Inst. of Technology & Osaka City University, Japan

51

Solution of Nonlinear Elliptic Equations with Boundary Singularities by an Integral Equation Method

D.B. Ingham & M.A. Kelmanson, University of Leeds, UK

61

SESSION II POTENTIAL PROBLEMS

Applications of the Charge Simulation Method to the Two-Dimensional Potential Problem that Contains Curved Arcs as its Boundary

S. Murashima, S. Kuhara & H. Nieda, Kagoshima University, Yatsushiro National College & Miyazaki University, Japan

75

Location of Free Surface for Zoned Problems - A New Economical Boundary Element Method

Z. J. Dong, Shanghai Institute of Computer Technology, China

85

Boundary Elements and Non-linear Programming in Aquifer Management

D. Tolikas, P. Latinopoulos & J. Ganoulis, Aristotle University of Thessaloniki, Greece

95

SESSION III ELECTRO/MAGNETIC FIELD PROBLEMS

Magnetic Field Calculation of Superconducting Alternators by a Boundary Element Method 105
T. Nomura, S. Nakamura & H. Kohno, Mitsubishi Electric Corp., Japan

Hybrid Finite-Boundary Element Method Using Vector and Scalar Potentials for Open Boundary Magnetic Field Problem 113
T. Onuki, A. Ishiyama, T. Abe & Y. Murai, Waseda University, Japan

The Electromagnetic Field Analysis by Boundary Element Method 123
S. Washisu & I. Fukai, Asahikawa Technical College & Hokkaido University, Japan

SESSION IV HEAT TRANSFER

Three-Dimensional Transient Heat Conduction by the Boundary Element Method 135
H.L.G. Pina & J.L.M. Fernandes, Instituto Superior Tecnico, Portugal

Application of BEM to Unsteady 3-Dimensional Heat Conduction Problems with Non-linear Boundary Conditions 143
M. Koizumi, M. Utamura & K. Kotani, Hitachi Ltd., Japan

Application of the Boundary Element Method in Two and Three Dimensional Unsteady Heat Transfer Problems Involving Phase Change; Solidification Problems 153
C.P. Hong, T. Umeda & Y. Kimura, University of Tokyo, Japan

Boundary Elements to Phase Change Problems 163
S. Takahashi, K. Onishi, T. Kuroki & K. Hayashi, Science University of Tokyo, & Fukuoka University, Japan

A Boundary Element Solution to Stefan's Problem 173
L.C. Wrobel, University of Rio de Janeiro, Brazil

Boundary Element Method Applied to Fire Simulation 183
M. Tanaka, M. Morita, K. Onishi & T. Kuroki, Shinshu University, Science University of Tokyo, Fukuoka University, Japan

A Family of Partially Discontinuous Boundary Elements for Three Dimensional Analyses 193
C. Patterson & N.A. S.El-Sebai, University of Sheffield, UK

SESSION V POTENTIAL WAVE PROBLEMS

Hybrid B.E.M. for Calculating Nonlinear Wave Forces on the 3-Dimensional Bodies 209
K. Masuda, W. Kato, Nihon University, Japan

Resonance in Harbors of Arbitrary Topography	217
<i>A. Yoshida & T. Ijima, Kyushu University, Japan</i>	
Study of the Wave Action on Floating Structures by Boundary Elements. Comparison with Finite Element and Experimental Results	227
<i>S. Grilli & A. Lejeune, University of Liege, Belgium</i>	
Numerical Analysis of Transient, Finite Amplitude Motion of a Moored, Submerged Cylinder	239
<i>S. Nagata & T. Ijima, Hitach Zosen Corpo. & Kyushu University, Japan</i>	

SESSION VI FLUID-FLOW

The Solution of Convective Problems in Laminar Flow	251
<i>P. Skerget & C. Brebbia, University of Maribor, Yugoslavia & Computational Mechanics Centre, UK</i>	
Boundary Elements in Transient Convective Diffusion Problem	275
<i>M. Ikeuchi & K. Onishi, Okayama University of Science and Fukuoka University, Japan</i>	
A Boundary Integral Equation Method for the Stationary Stokes Problem in 3D	283
<i>J. Zhu, Chongqing Institute of Architecture and Engineering, China</i>	
A Special Boundary Element Technique in Transonic Flow	293
<i>Y. Zuosheng, Nanjing Aeronautical Institute, China</i>	
Free-Surface Flow Over a Channel with Rectangular Obstruction	301
<i>K. Mizumura, Kanazawa Inst. of Technology</i>	
A Boundary Integral Equation Method for the Study of Slow Flow Within Bearing Geometries	311
<i>D.B. Ingham & M.A. Kelmanson, University of Leeds, UK</i>	
A Modified Boundary Element Method for the Three-Dimensional Problem of Fluid Oscillation	323
<i>K. Schiffner, Universitat Siegen</i>	

SESSION VII ELASTICITY PROBLEMS

The Charge Simulation Method and its Applications to Two-Dimensional Elasticity	339
<i>S. Murashima, Y. Nonaka & H. Nieda, Kagoshima University, Miyazaki University, Japan</i>	
A Boundary Integral Equation Formulation for Three Dimensional Anisotropic Elastostatics	345
<i>N. Nishimura & S. Kobayashi, Kyoto University, Japan</i>	
Analysis of Axisymmetrical Torsion Problems by the Boundary Element Method	355
<i>Y. Miyamoto, Iwate University</i>	

Boundary Element Analysis of the Elastic Response of Rigid Disc Inclusions Embedded at a Bi-Material Interface <i>A.P.S. Selvadurai & M.C. Au, Carleton University, Canada</i>	365
Applications of Discrete Singularity Method in Engineering <i>H. Yano, S. Fukutani, T. Watanabe, N. Nakajima and A. Kieda, Doshisha University, Japan</i>	379
Some Applications of BEM for Evaluation of the Deformation of Tool and Calculation of the Residual Stress Distribution in Product in the Plastic Working Processes <i>J. Kihara, G. Shen, T. Yamauchi, H. Mimura, H. Makino & B. Liu, University of Tokyo, Japan</i>	393
An Alternative BEM Formulation Applied to Plane Elasticity Problems <i>J.R. Hutchinson, University of California, USA</i>	407
An Application of Boundary Element Method to Thermoelastic Problems <i>M. Tanaka, H. Togoh & M. Kikuta, Shinshu University, Nippon Sheet Glass Company, Japan</i>	417
A Modified Trefftz Method for Three Dimensional Elasticity <i>C. Patterson & M.A. Sheikh, University of Sheffield, UK</i>	427
Stochastic Boundary Element Method Applied to Stress Analysis <i>S. Nakagiri, K. Suzuki & T. Hisada, Institute of Industrial Science, University of Tokyo, Japan</i>	439
The DBEM in Elastostatics Using Green's Generalized Theorem <i>P. De Simone, Naples University, Italy</i>	449
SESSION VIII STRESS CONCRETE/FRACTURE MECHANICS	
Computation of 3-Dimensional Stress Intensity Factors Using Special Boundary Elements <i>M.L. Luchi & A. Poggialini, University of Calabria, Italy</i>	461
Application of the Boundary Element Method to Fracture Mechanics Problems <i>H. Tamura & Y. Nagao, Fuji Heavy Industries</i>	471
J-Integral Calculations with Boundary Elements <i>K. Kishitani, T. Hirai & K. Murakami, University of Tokyo, Oita University & University of Tokyo, Japan</i>	481
Prediction of Crack Growth Direction Using the Boundary Element Method <i>R.N.L. Smith & J.C. Mason, Royal Military College of Science, UK</i>	495

SESSION IX PLATES AND SHELLS

- Finite and Postbuckling Deformations of Heated Plates and Shallow Shells 507
N. Kamiya, Y. Sawaki & Y. Nakamura, Mie University, Japan
- Bending Analysis of Perforated Plates with Unsupported or Clamped Edges by BEM 517
T. Katayama, T. Sekiya & H. Tai, University of Osaka & Kobe Steel, Japan
- A Boundary Integral Equation Formulation for Elastic Shallow Shell Bending Problems 527
N. Tosaka & S. Miyake, Nihon University, Japan
- Spline Function Used in Boundary Element Methods 539
C. Xiangfu & Q. Rong, Design Institute of Ministry of Commerce & Guangxi University, China

SESSION X INELASTIC PROBLEMS

- A Boundary Element Approach to Limit Analysis 551
G. Maier & C. Polizzotto, Technical University of Milan & University of Palermo, Italy
- Boundary Element Analysis of Contact Thermo-elastoplastic Problems with Creep and the Numerical Technique 567
T. Tsuta & S. Yamaji, Technical Research Institute, Kawasaki Heavy Industries, Japan
- A Boundary Element Formulation for Axisymmetric Plasticity 577
J.C.F. Telles, University Federal do Rio de Janeiro, Brazil
- Elasto-Plastic Instability Analysis of Thin Plates 589
H. Okada, M. Fujimoto & H. Abe, Aich Institute of Technology, Tokyo Institute of Technology & Takenaka Koumuten Co., Ltd., Japan
- Applying Analytical Functions to Define Special Boundary Elements in Anelasto-Plastic Problem with Singularities Idealized by Finite Elements 599
O. Ohtmer, Messerschmitt-Bolkow-Blohm GmbH, Germany

SESSION XI GEOMECHANICS

- On the Boundary Element Analysis of Excavation in Rock 623
G. Beer & J.L. MEEK, University of Queensland, Australia
- Axisymmetrical Boundary Element Applications to the Deep Cavity Problem 635
M. Okabe & U. Yamaguchi, Mitsui Mining & Smelting Co., & the University of Tokyo, Japan

Application of Boundary Element Method for Back
Analysis Associated with Tunnelling Problems 645
N. Shimizu & S. Sakurai, Kobe University, Japan

Effective and Neutral Stresses in Soils Using Boun-
dary Element Methods 655
*E. Alarcon, C. Garcia-Suarez & A. Reverter, Poly-
technical University of Madrid, Spain*

Boundary Element Method in Axisymmetric Linear Con-
solidation 665
*G. Aramaki, T. Kuroki, K. Yasuhara & K. Onishi,
Saga University, Fukuoka University & Nishinippon
Institute of Technology, Japan*

SESSION XII DYNAMICS

Transient Elastodynamics Using a Time-Stepping
Technique 677
*W.J. Mansur & C.A. Brebbia, Federal University of
Rio de Janeiro, Brazil & Southampton University and
Computational Mechanics Centre, UK*

Seismic Response Analyses of Ground with Irregular
Profiles by the Boundary Element Method 699
*K. Toki & T. Sato, Disaster Prevention Research Insti-
tute, Kyoto University, Japan*

Application of Complex Variable Theory to the Free
Vibration of Plates 709
*B.A. Ounc & G.Z. Voyiadjis, University of Southwest-
ern Louisiana & Louisiana State University, USA*

Transient Dynamic Analysis by the Boundary Element
Method 719
*D. Nardini & C.A. Brebbia, University of Zagreb,
Yugoslavia and University of Southampton, UK*

Applications of the Boundary Integral Equation Method
to Dynamic Soil-Structure Interaction Analysis Under
Topographic Site Condition 731
T. Kobori & Y. Shinozaki, Kyoto University, Japan

The Fundamental Solution for Periodically Oscillating
Line Torsional Loads on a Circular Ring Interior of
a Semi-Infinite Solid and its Application 741
*O. Matsuoka, T. Yokoi & K. Torii, Nagoya University,
Japan*

Elastodynamic Problems for Inhomogeneous Bodies 751
*Y. Niwa, M. Kitahara & S. Hirose, Kyoto University &
Tokai University, Japan*

Dynamic Response Analysis of Rigid Foundations Sub-
jected to Seismic Waves by Boundary Element Method 765
*T. Sato, H. Kawase & K. Yoshida, Ohsaki Research Insti-
tute, Shimizu Construction Co., Ltd., Japan*

Some Problems of the Boundary Integral Equation Method in Elastodynamics <i>S. Kobayashi, Kyoto University, Japan</i>	775
Dynamic Soil-Structure Interaction Analysis by Hybrid Method <i>A. Mita & W. Takanashi, Ohsaki Research Institute, Shimizu Construction Co., Ltd., Japan</i>	785
SESSION XIII INDUSTRIAL APPLICATIONS	
CA.ST.OR 3D : Three Dimensional Boundary Element Analysis Computer Code <i>A. Chaudouet & M. Afzali, CETIM, France</i>	797
Application of the Boundary Element Method to Machine Elements (Stress Analyses of Threaded Connections and Gears) <i>M. Tanaka, Shinshu University, Japan</i>	811
Using Beasy to Solve Torsion Problems <i>D.J. Danson, G. Kuich, Computational Mechanics Centre, UK & Femcad AG, Switzerland</i>	821
BEMDYN - A Boundary Element Program for Two-Dimensional Elastodynamics <i>O. Tullberg, Chalmers University of Technology, Sweden</i>	835
Interactive Structural Analysis System Using the Advanced Boundary Element Method <i>T. Higashimachi, N. Okamoto, Y. Ezawa, T. Aizawa & A. Ito, Mechanical Engineering Research Laboratory, Hitachi Ltd., Japan</i>	847
Further Engineering Applications of Beasy <i>D.J. Danson & C.A. Brebbia, Computational Mechanics, UK</i>	857
SESSION XIV OPTIMIZATION	
Optimization of the Shape of Solid and Hollow Shafts Using Boundary Elements <i>C.A. Mota Soares, H.C. Rodrigues & L.M. Oliveira Faria, Universidade Tecnica de Lisboa, Portugal & University of Iowa, USA</i>	883
Boundary Element Method - Finite Element Method Coupled with Linear Programming for Optimal Control of Distributed Parameter Systems <i>T. Futagami, Hiroshima Institute of Technology, Japan</i>	891
A Comparison of BEM and FEM in Minimum Weight Design <i>A. Zochowski & K. Mizukami, Systems Research Institute, Poland & Hiroshima University, Japan</i>	901

SESSION XV NUMERICAL TECHNIQUES

A Three Dimensional Boundary Element Approach for Rotationally Symmetrical Problems 915
M.C. Au & C.A. Brebbia, Computational Mechanics Centre, UK

On Corner Solutions by Indirect B.I.E.M. 929
T. Fukui, Fukui University, Japan

BIFM/FEM Comparison for the Calculation of an Asymmetric Port-Hole Holder 939
P. Chauchot, J. Labeyrie, Centre Oceanologique de Bretagne, France

Fundamentals and Application of Spline Boundary Element Method 949
Q. Rong, Kwansi University, China

SESSION XVI COUPLING

A Substructuring Technique for BEM - Application to Vibrations of Fluids Coupled with Structures 965
H. Otte, Technische Universität Braunschweig, Germany

Elastic-Plastic Fracture Mechanics Analysis by Combination of Boundary and Finite Element Methods 975
K. Kishimoto, I. Yamaguchi, M. Tachihara, S. Aoki & M. Sakata, Tokyo Institute of Technology & Ebara Corporation, Japan

Three Dimensional Symmetric Coupling of Boundary and Finite Element Methods 985
M. Hisatake, T. Ito & H. Ueda, Osaka University & Pacific Consultant International, Japan

Boundary Elements Superposition Method to Solve Dynamic Soil-Structure Interaction 995
K. Miura, K. Masuda, F. Sasaki, Y. Miyamoto & K. Urao, Kajima Institute of Construction, Japan

Numerical Analysis of Coupled Fluid-Elasticity Systems Using the Boundary Element Method 1005
K. Kakuda & N. Tosaka, Nihon University, Japan

Infinite Boundary Element and its Application to a Combined Finite-Boundary Element Technique for Unbounded Field Problem 1017
Y. Kagawa, T. Yamabuchi & S. Kitagami, Toyama University, Japan

The Boundary Elements Applied to Elastostatics 1027
S. Y. Ma, Hebei Engineering Institute, China & University of Rome, Italy

Analysis of Surface Wave in Seas by Heuristic Finite Element and Boundary Element Method 1037
M. Kawahara, K. Kashiyama & A. Tomita, Chuo University, Japan
