

Table of Contents

Introduction	3
1. Banach Lie groups	8
2. Diffeomorphism groups	12
3. The exponential mapping	14
4. ILH-Lie groups	16
5. Volume preserving diffeomorphisms and incompressible hydrodynamics	19
6. Semidirect product diffeomorphism groups and compressible hydrodynamics	24
7. Symplectomorphisms and plasma physics	27
8. Diffeomorphism groups in general relativity	31
9. Gauge groups and quantum field theories	33
10. Globally Hamiltonian vector fields and quantomorphism groups	38
11. The group of homogeneous symplectomorphisms of $T^*M \setminus \{0\}$	40
12. Fourier integral operators as an ILH-Lie group and completely integrable PDE's	44
