

CONTENTS

PREFACE	3
CONTENTS	4
SCIENTIFIC PROGRAM	6
LIST OF PARTICIPANTS	11
S.S. Agaian – D.Z. Gevorkian, On parallel algorithms of some orthogonal transforms	15
I. Arany, An efficient algorithm for finding peripheral nodes	27
S. Bocian – B. Mikolajczak, Computational aspects of assigning characteristic semigroup of asynchronous automata and their extensions	37
P. Borowik, Reichenbach's propositional logic in algorithmic form	47
P.M. Camerini – G. Galbiati – F. Maffioli, The complexity of weighted multi-constrained spanning tree problems	53
K. Chmiel, An algorithm for finding SC-preimages of a deterministic finite automaton	103
Th. Fischer, On entropy decomposition methods and algorithm design	113
D. Fox, An efficient algorithm for dynamic string-storage allocation	129
M.R. Garey – R.Y. Pinter, Covering intervals with intervals under containment constraints	139
O. Goldreich – S. Goldwasser – S. Micali, How to construct random functions	161
F. Hoffmann, Four pebbles don't suffice to search planar infinite labyrinths	191
F. Hossfeld, Parallel algorithms: The impact of communication complexity	207
A. Iványi, Tight worst-case bounds for bin packing algorithms	233
D.S. Johnson – H.O. Pollak, Hypergraph planarity and the complexity of drawing Venn diagrams	241

S. Jukna, Convolutional characterization of computability and complexity of computations	251
S. Jukna, Succinct data representations and the complexity of computations	271
R. Kannan, Lattices, basis reduction and the shortest vector problem	283
M. Liškiewicz – K. Loryś – M. Piotrow, The characterization of some complexity classes by recursion schemata	313
L. Lovász, Some algorithmic problems on lattices	323
J. Morávek, Linear proofs in the non-negative cone	339
J.B. Paris – W.G. Handley – A.J. Wilkie, Characterizing some low arithmetic classes	353
A. Rycerz – J. Jegier, Constructing a simplex form of a rational matrix	365
I. Ruzsa – Zs. Tuza, Computing N with a few number of additions	371
C.P. Schnorr, A hierarchy of polynomial time basis reduction algorithms	375
M. Sipser, A topological view of some problems in complexity theory	387
L. Staiger, ω -computations on Turing machines and the accepted languages	393
Gy. Turán, On the greedy algorithm for an edge-partitioning problem	405
T.R. Walsh, The complexity of linear quadrees	425
