

CONTENTS

Foreword	vii
Introduction to spontaneous symmetry breaking. Some examples <i>L. Michel</i>	1
Introduction to spontaneous symmetry breakdown in classical lattice systems <i>Ch. Gruber & C. Ed. Pfister</i>	27
Topological defects in systems of broken symmetry <i>H. -R. Trebin</i>	61
Representations of symmetric and general linear groups: tables, problems, trends and applications <i>A. Kerber</i>	81
Studies in phase transitions and solitons <i>R. Chatterjee</i>	97
Symmetry properties of modulated crystals <i>A. Janner & T. Janssen</i>	103
Symmetry changes in crystal structures <i>T. Janssen & A. Janner</i>	129
Applicability of the Landau theory to structural, incommensurate, and magnetic phase transitions <i>P. Tolédano</i>	167
Coupling coefficients for space group representations <i>M. Suffczyński</i>	197

Some aspects of the symmetry breaking in the 2-D Ising model and in the one component Coulomb system <i>D. Merlini</i>	201
Racah algebra for permutation representations of finite groups <i>T. Lulek</i>	217
Symmetry changes at a tricritical point <i>J. Kociński</i>	237
States and representations of partial $*$ -algebras <i>J. -P. Antoine</i>	247
Spontaneous breaking in supersymmetry <i>L. O'Raifeartaigh</i>	269
Reconciliation of the unified field theory with phenomenology <i>J. Rayski</i>	303
Invariant tensor fields and linear connections on extended spacetime <i>L. Nikolova & V. A. Rizov</i>	317
Fiber bundles and Kaluza-Klein theory <i>A. Jadczyk</i>	333
Relation between group contraction and non-linear realizations <i>E. Celeghini, M. Tarlini & G. Vitiello</i>	343
Geometry of spontaneous symmetry breaking <i>H. Ruegg</i>	375
Can the principle of maximum speed imply Lorentz invariance? <i>H. -J. Borchers</i>	385

Dynamical treatment of constraints in gauge theories: integration over all potentials	399
<i>I. Bialynicki-Birula</i>	
Harmonic superspace: a new approach to extended supersymmetry	413
<i>E. Ivanov</i>	
Symmetries and supersymmetry in nuclear physics	447
<i>S. Szpikowski</i>	
Macroscopic quantum phenomena as weakly coupled spontaneous symmetry breaking	459
<i>A. Rieckers</i>
