

TABLE OF CONTENTS

<i>Preface</i>	vii
<i>List of Participants</i>	ix
 <i>Chapter 1: Some theoretical Aspects</i>	
1.1 Mathematics and fuzziness R. Lowen	3
1.2 Radon-Nikodym Theorem for fuzzy set-valued measures D. A. Ralescu	39
1.3 Construction of a probability distribution from a fuzzy information S. Moral	51
1.4 Convolution of fuzzyness and probability A. O. Arigoni	61
1.5 Fuzzy sets and subobjects U. Höhle	69
 <i>Chapter 2: From theory to applications</i>	
2.1 Outline of a theory of usuality based on fuzzy logic L. A. Zadeh	79
2.2 Fuzzy sets theory and mathematical programming H.-J. Zimmermann	99
2.3 Decisions with usual values R. R. Yager	115
2.4 Support logic programming J. F. Baldwin	133
2.5 Hybrid data - various associations between fuzzy subsets and random variables A. Kaufmann	171

2.6	Fuzzy relation equations : methodology and applications E. Sanchez	213
<i>Chapter 3: Various particular applications</i>		
3.1	Multi criteria decision making in crisp and fuzzy environments H.-J. Zimmermann	233
3.2	Fuzzy subsets applications in O.R. and management A. Kaufmann	257
3.3	Character recognition by means of fuzzy set reasoning J. Mantas	301
3.4	Computerized electrocardiography and fuzzy sets R. Degani and G. Bortolan	317
3.5	Medical applications with fuzzy sets E. Sanchez	331
3.6	Fuzzy subsets in didactic processes A. Jones	349
	<i>Subject index</i>	397
