

CONTENTS

Preface.....	7
List of Participants.....	9
Program of the Sessions.....	12

I. Spline Functions

P.J. Laurent: Quadratic convex analysis and splines	17
J. Blatter: Best uniform approximation by splines with fixed knots : an algorithmic approach.....	45
A. Le Mehaute: Interpolation with minimizing triangular finite elements in \mathbb{R}^2	59
J. Lemordant: Developable splines.....	67
R. Kulkarni: On error bounds for odd degree interpolatory splines.....	75
I. Narayanaswamy: Simultaneous approximation and interpolation with norm-preservation by Tchebysheffian splines.....	89

II. Convex Analysis, Best Approximation and Geometry of Banach Spaces

A.L. Brown: Chebyshev sets and the shapes of convex bodies.....	97
E. Casini, P.L. Papini, C. Zanco: Separation and approximation in normed linear spaces.....	123
M. Baronti, P.L. Papini: Convergence of sequence of sets.....	135
G.S. Rao, K.R. Chandrasekaran: The modulus of continuity of the set-valued cometric projection.....	157
S. Elumalai: Best coapproximation in normed linear spaces.....	165

III. Optimal Estimation, N-widths and Related Topics

S.D. Fisher: Optimal sampling of holomorphic functions.....	175
C.A. Micchelli: N-width for holomorphic functions on the unit ball in n-space	195
L.D. Irvine, P.W. Smith: Constrained minimization in a dual space.....	205

D. Zwick: Extension of positive linear functionals : application to shape preserving interpolation.....	221
D.V. Pai: Abstract minimization problems, restricted centers and fixed points	231
M. Suri: Some optimal approximation results with applications to the h-, p- and h-p versions of the finite element method.....	245

IV. Interpolation and Classical Approximation

L. Maligranda: Interpolation spaces in the theory of approximation.....	263
M.A. Bokhari, A. Sharma: Equiconvergence of certain sequences of rational interpolants (Hermite case)	281
F. Schurer, F.W. Steutel: Some new aspects of approximation with Jackson-type operators	293

V. Approximate Solutions of Operator Equations

P.M. Anselone: Recent advances in operator approximation theory.....	309
F. Chatelin, M. Ahues, M. Talias: Computing a set of eigenvalues	325
H.W. Engl: Methods for approximating solutions of ill-posed linear operator equations based on numerical functional analysis	337
A.K. Pani, P.C. Das: An H^1 -Galerkin method for quasilinear parabolic partial differential equations.....	357
B.V. Limaye, M.T. Nair: Rayleigh-Schrodinger procedure for iterative refinement of computed eigenelements under strong approximation.....	371
M.T. Nair: On spectral variation under relatively bounded perturbation	389
G.R. Shendge, V.N. Dasare: Existence of maximal and minimal quasi-fixed points of mixed monotone operators by iterative technique.....	401
