

CONTENTS

P. Cannarsa, V. Vespri - Existence and uniqueness results for a non linear stochastic partial differential equation	1
M. Chaleyat-Maurel - Continuity in non linear filtering. Some different approaches	25
P.L. Chow - Expectation functionals associated with some stochastic evolution equations	40
F. Flandoli - Dirichlet boundary value problem and optimal control for a stochastic distributed parameter system	57
L. Hazareesingh, D. Kannan - Stochastic product integration and stochastic equations	72
W.E. Hopkins, Jr. - Some remarks on a problem in stochastic optimal control ..	121
H. Korezlioglu - Passage from two-parameters to infinite dimension	131
H.-H. Kuo - The heat equation and Fourier transforms of generalized Brownian functionals	154
A. Ichikawa - The separation principle for stochastic differential equations with unbounded coefficients	164
M. Métivier - Weak convergence of measure valued processes using Sobolev-embedding techniques	172
D. Ocone - Probability distributions of solutions to some stochastic partial differential equations	184
E. Pardoux - Two-sided stochastic calculus for SPDEs	200
M. Piccioni - Convergence of implicit discretization schemes for linear differential equations with application to filtering	208
A.S. Ustunel - Some applications of the Malliavin calculus to stochastic analysis	230
J. Zabczyk - Exit problem for infinite dimensional systems	239
