Introduction	vii
Photograph	ix
1. Automorphisms of solvable groups, Part I S. Bachmuth	1
2. Automorphisms of solvable groups, Part II H.Y. Mochizuki	15
3. A survey of groups with a single defining relation G. Baumslag	30
4. Some algorithms for computing with finite permutation groups P.M. Neumann	59
5. Five lectures on group rings J.E. Roseblade	93
6. Buildings and group amalgamations J. Tits	110
7. Finite presentability of S-arithmetic groups H. Abels	128
8. Efficient presentations of $GL(2, \mathbb{Z})$ and $PGL(2, \mathbb{Z})$ F.R. Beyl & G. Rosenberger	135
9. The commutator map R. Brandl	138
10. Polynomial functions and representations H.K. Farahat	143
11. On questions of Brauer and Feit P.A. Ferguson	147
12. The Picard group and the modular group B. Fine	150
13. Factor groups of the lower central series of free products of finitely generated abelian groups A.M. Gaglione & H.V. Waldinger	164
14. Lattice ordered groups - a very biased survey A.M.W. Glass	204
15. Totally orthogonal finite groups L.C. Grove & K.S. Wang	213
16. One-relator products of groups J. Howie	216
17. The Cavicchioli groups are pairwise non-isomorphic D.L. Johnson & R.M. Thomas	220
18. Congruence and non-congruence subgroups of the modular group: a survey G.A. Jones	223
19. Small cancellation theory with non-homogeneous geometrical conditions and application to certain Artin groups A. Juhász	235
20. The Lie algebra associated to the lower central series of a group J.P. Labute	242

21.	Algebraically closed locally finite groups F. Leinen	246
22.	On power-commutative and commutation transitive groups F. Levin & G. Rosenberger	249
23.	Dimension function for discrete groups A. Lubotsky	254
24.	Coset graphs R.C. Lyndon	263
25.	Nilpotent quotient algorithms I.D. Macdonald	268
26.	Generators of p-groups A. Mann	273
27.	On the matrix groups associated to the isometries of the hyperbolic plane E. Martinez	282
28.	A characteristic subgroup of \underline{N} -stable groups D. Perez Ramos	288
29.	The isomorphism problem for integral group rings of finite nilpotent groups K.W. Roggenkamp & L.L. Scott	291
30.	Embedding the root group geometry of ${}^2F_4(q)$ J. Sarli	300
31.	On generalized Frobenius complements C.M. Scoppola	305
32.	Subgroups of finite index in soluble groups: I D. Segal	307
33.	Subgroups of finite index in soluble groups: II D. Segal	315
34.	Some interconnections between group theory and logic T. Tollis	320
35.	Groups covered by abelian subgroups M.J. Tomkinson	332
36.	Embeddings of infinite permutation groups J.K. Truss	335
37.	Maximal subgroups of sporadic groups R.A. Wilson	352
