CONTENTS

Analytical Solutions for Ordinary and Partial Differential Equations
G. Adomian................................................................. 1

On the Ratio of the First Two Eigenvalues of Schrödinger Operators with Positive Potentials
Mark S. Ashbaugh and Rafael Benguria........................................ 16

Inverse Scattering for Self-Adjoint \( n \) th Order Differential Operators on the Line
R. Beals, P. Deift, and C. Tomei........................................ 26

On the Dirichlet Index Conjecture
R.C. Brown and Don Hinton............................................... 39

Three-Dimensional Inverse Scattering
Margaret Cheney, James H. Rose, and Brian DeFazio....................... 46

Spectral Properties of Schrödinger Operators with Trapping Potentials in the Semi-Classical Limit
J.M. Combes, Ph. Briet, and P. Duclos.................................. 55

Discrete Sets of Coherent States and their Use in Signal Analysis
Ingrid Daubechies.............................................................. 73

Information, Uncertainty and the Singular Value Decomposition of the Filtered Fourier Transformation
B. DePacto and O. Brander................................................... 83

On Schrodinger Operators with von Neumann-Wigner Type Potentials
Allen Devinatz, Richard Moechel, and Peter Rejto....................... 91

Nonlinear Conservative Systems
Ronald J. DiPerna.......................................................... 99

The Initial Value Problem for the Nonlinear Equations for Zero Mach Number Combustion
Pedro Embid................................................................. 110

Longtime Solutions for a Class of Convection Diffusion Systems
W.E. Fitzgibbon............................................................... 119

A Closed Form for the Symbol of the Resolvent Parametrix of an Elliptic Operator
S. A. Fulling and G. Kennedy............................................ 126
Existence and Finite-Dimensionality of Attractors for the Landau-Lifschitz Equations
Tepper L. Gill and W.W. Zachary................................. 134

The Coulomb Potential in Higher Dimensions
Jerome A. Goldstein and Gisele Ruiz Rieder.................... 143

A Regularity Theorem for Differential Equations of Constant Strength
Gudrun Gudmundsdottir.............................................. 150

Intermittent Bifurcation of Vortex Flows
Karl Gustafson....................................................... 155

Remarks on the Scattering Problem for Nonlinear Schrödinger Equations
Nakao Hayashi and Yoshio Tsutsumi.............................. 162

Asymptotics of Solutions and Spectra of Perturbed Periodic Hamiltonian Systems
D. B. Hinton and J. K. Shaw........................................ 169

Behavior of Eigenfunctions and the Spectrum of Schrödinger Operators
Andreas M. Hinz.................................................... 175

Shape Resonances in Quantum Mechanics
P.D. Hislop and I. M. Sigal........................................ 180

Random Perturbation Theory and Quantum Chaos
James S. Howland.................................................. 197

Path Integral for a Weyl Quantized Relativistic Hamiltonian and the Nonrelativistic Limit Problem
Takahsi Ichinose.................................................... 205

Scattering with Penetrable Wall Potentials
Teruo Thebe and Shin-ichi Shimada............................... 211

Commutator Methods and Asymptotic Completeness for a New Class of Stark Effect Hamiltonians
Arne Jensen......................................................... 215

Asymptotics of the Titchmarsh-Weyl m-Coefficient for Integrable Potentials, II
Hans G. Kaper and Man Kam Kwong.............................. 222

On the Difference Between Eigenvalues of Sturm-Liouville Operators and the Semiclassical Limit
Werner Kirsch....................................................... 230

Finite Element Approximation to Singular Minimizers and Applications to Cavitation in Non-Linear Elasticity
Greg Knowles........................................................ 236

On Relating Generalized Expansions to Fourier Integrals
N.A. Kon, L.A. Raphael, and J.E. Young.......................... 248
Link Between Periodic Potentials and Random Potentials in One-Dimensional Schrödinger Operators

Shinichi Kotani

Undressing of Odd Pseudodifferential Operators

B.A. Kupershmidt

Some Mathematical Aspects of the Wavemaker Theory

K. G. Lamb and G. Tenti

Integro-Differential Equations Associated with Piecewise Deterministic Processes

Suzanne N. Lenhart and Yu-Chung Liao

Ambrosetti-Prodi Type Results in Nonlinear Boundary Value Problems

Jean Mawhin

Transmutation of Analytic and Harmonic Functions

Peter A. McCoy

Some Solved and Unsolved Canonical Problems of Diffraction Theory

Erhard Meister

Runge-Kutta Schemes and Numerical Instabilities: The Logistic Equation

Ronald E. Mickens

Structure of Positive Solutions to (-Δ+V)u = 0 in \( \mathbb{R}^n \)

Minoru Murata

An Extension of Lavine’s Formula for Time-Delay

Shu Nakamura

Some Open Questions in Multi-Dimensional Inverse Problems

Roger G. Newton

Radially Symmetric Solutions of a Monge–Ampere Equation Arising in a Reflector Mapping Problem

V. Oliker and P. Waltman

Scattering Theory for the Wave Equation on a Hyperbolic Manifold

Ralph Phillips, Bettina Wiskott, and Alex Woo

On Unsteady Flow in a Two-Dimensional Cascade with In-Passage Shocks

Kewal K. Puri

On the Absorption of Singularities in Dissipative Nonlinear Equations

Jeffrey Rauch and Michael C. Reed

Feedback Control for an Abstract Parabolic Equation

Rouben Rostamian, Takao Nambu, and Thomas I. Seidman

Approximate Solution of Random Differential Equation

N. Sambandham and Negash Medhin

Geometric Properties and Bounds for Positive Solutions of Semilinear Elliptic Equations

Klaus Schmitt
Asymptotic Completeness of Multiparticle Scattering

I. N. Sigal and A. Soffer ....................................................... 435

On a Multi-Dimensional Inverse Problem Related to the Gel'fand-Levitan Theory

Takashi Suzuki ................................................................. 473

Fundamental Solution of the Poisson-Boltzmann Equation

Kyril Tintarev ................................................................. 480

Examples of Exponential Decay of Eigenfunctions of Magnetic Schrödinger Operators

Jun Uchiyama ................................................................. 486

Spatially Localized Free Vibrations of Certain Semilinear Wave Equations on $\mathbb{R}^2$: Recent Results and Open Problems.

Pierre-A. Vuillermot ......................................................... 493
