

CONTENTS

Contributors	xi
Some recent discoveries in number theory and analysis made by the use of a computer by R.F. Churchhouse	1
Some computations relating to the Riemann Zeta function by A.M. Cohen	15
Implementing data security by H.J. Beker	31
Multi-dimensional continued fractions and their applications by W. Lunnon	41
Probabilistic prime tests by C. Boyd	57
Galois module structure of elliptic functions by R. Pinch	69
Computations for additive diophantine equations: pairs of quintic congruences II by R.J. Cook	93
Integration in closed form by J.H. Davenport	119
Some applications of computers in design theory by M.J. Grannell and T.S. Griggs	135
Computing for the arithmetic of geometries by D. Livingstone	149
Groups - a database for computational algebra by M.F. Worboys	153
Partially ordered sets and sorting by M.D. Atkinson	161
Results in elasticity theory using complex Fortran by A. Sackfield and D.A. Hills	177

The influence of computers in statistics by B.J.T. Morgan	187
Integral equations in traffic noise simulation by S.N. Chandler-Wilde and D.C. Hothersall	207
Industrial numerical analysis by S. McKee	237
