

## CONTENTS

Contributors	xiii
A review of some mixing experiments relevant to dense gas dispersion by R.E. Britter	1
Some measurements of turbulence length scales in the stably-stratified surface layer by J.C. King	39
Observations of internal gravity waves in the stably-stratified atmospheric boundary layer by M.S. Darby and S.D. Mobbs	55
Turbulence, waves and entrainment near density inversion layers by D.J. Carruthers and J.C.R. Hunt	77
Development of density discontinuities in a turbulent fluid by P.F. Linden and J.E. Simpson	97
Similarity solutions for two-dimensional steady gravity currents by P.W.M. Brighton	115
The spreading and mixing of a dense cloud in still air by A.P. van Ulden	141
Methods of validating models of dense gas dispersion: a review by A. Mercer	169
Analysis of Thorney Island data: variability and box models by K.K. Carn, S.J. Sherrell and P.C. Chatwin	205
A model for gravity-dominated dispersion of dense-gas clouds by J.S. Puttock	233
Recent developments on the FEM3 and SLAB atmospheric dispersion models by D.L. Ermak and S.T. Chan	261
Length scales in stably stratified turbulent flows and their use in turbulence models by J.C.R. Hunt, D.D. Stretch and R.E. Britter	285

The use of a three dimensional model for simulating Thorney Island field trials by Y. Riou	323
Finite element calculations of transient dense gas dispersion by P.L. Betts and V. Haroutunian	349
Stably stratified free surface shear layers with internal hydraulic jumps by J.J. McGuirk and C. Papadimitriou	385
Second-moment modelling of free buoyant shear flows: a comparison of parabolic and elliptic solutions by V. Haroutunian and B.E. Launder	409
