

## CONTENTS

<u>Feng Kang and Qin Meng-zhao</u> : The symplectic methods for the computation of Hamiltonian equations .....	1
<u>Han Hou-de</u> : The boundary finite element methods for Signorini problems .....	38
<u>Huang Ming-you</u> : A Hamiltonian approximation for nonlinear wave equations on $n$ -dimensional spheres $S^n$ .....	50
<u>Kang Li-shan</u> : Parallel algorithms and domain decomposition .....	61
<u>Li De-yuan and Han Zhen</u> : A difference method for degenerate hyperbolic equations of second order .....	76
<u>Lin Qun and Xie Rui-feng</u> : Error expansions for finite element approximations and their applications .....	98
<u>Ma He-ping and Guo Ben-yu</u> : The Fourier pseudospectral method with a restrain operator for the M.K.D.V. equation .....	113
<u>Pan Zhong-xiong</u> : A numerical method for a class of nonlinear fourth order equations .....	121
<u>Shen Long-jun</u> : Convergence conditions of the explicit and weak implicit finite difference schemes for parabolic systems .....	129
<u>Shen Shu-min</u> : Finite element approximations for a variational inequality with a nonlinear monotone operator .....	141
<u>Wu Hua-mo and Wu Yu-hua</u> : Contour dynamics methods for discontinuous vortical flows .....	150
<u>Xu Jia-mo and Lu Jun-an</u> : Optimum domain problems governed by a class of PDE ...	165
<u>Yang Zhong-hua</u> : Folds of degree 4 and swallowtail catastrophe .....	171
<u>Ying Lung-an</u> : Convergence study for viscous splitting in bounded domains .....	184
<u>Zhu Ben-ren and Jin Mao-yuan</u> : An explicit scheme for an inverse scattering problem and its stability analysis .....	203
<u>Zhu You-lan and Yong Wen-an</u> : On stability and convergence of difference schemes for quasilinear hyperbolic initial-boundary-value problems .....	210
