

CONTENTS

Contributors	ix
An introduction to some of the mathematical and physical problems of modelling oil displacement in porous media by F.J. Fayers	1
Modelling of phase behaviour in chemical flood simulation by R.W.S. Foulser	53
High accuracy solutions for two phase multicomponent flow in porous media by K.S. Sorbie and L.J. Roberts	77
Review of the stochastic nature of reservoirs by H.H. Haldorsen, P.J. Brand and C.J. Macdonald	109
Stochastic simulation and viscous fingering by R.C. Ball	211
Effective values in averaging by P.R. King	217
The generation of stochastic fields of reservoir parameters with specified geostatistical distributions by C.L. Farmer	235
Advanced numerical techniques for reservoir simulation and their use on vector and parallel processors by I.M. Cheshire and R.K. Pollard	253
Application of high resolution simulation to modelling fluid instabilities by M.A. Christie	269
Discretisation techniques for multiphase flow by D. Waldren	285
Adaptive local mesh refinement and multi-grid solution methods in numerical reservoir simulation by G.H. Schmidt and F.J. Jacobs	295

The recovery of oil from underground reservoirs by E.J. Hinch	313
Fluid dynamics at pore scale by D. Wilkinson	343
The numerical simulation of hydrodynamic dispersion by J. Koplik	363
