

Galois Groups over \mathbf{Q}

TABLE OF CONTENTS

	PAGE
PREFACE	v
G. W. Anderson	
NORMALIZATION OF THE HYPERADELIC GAMMA FUNCTION	1
1. Gaussian units	7
2. The structure of $M_{r,\ell}$	13
3. Normalization	23
D. Blasius and D. Ramakrishnan	
MAASS FORMS AND GALOIS REPRESENTATIONS	33
1. Automorphic forms via representations	37
2. Holomorphic automorphic forms for $\mathrm{GSp}(4)$	40
3. Geometric automorphic forms	44
4. Reductions	46
5. Heuristics and conjectures	49
6. Transfer of problem to $\mathrm{GSp}(4, \mathbf{A}_{\mathbf{Q}})$	54
7. Hypothesis 1: structure of global L -packets for $\mathrm{GSp}(4)$	57
8. An analytic estimate for the conjugates of Maass forms	59
9. Hypothesis 2: Galois representations attached to Siegel modular forms of higher weight	66
10. The main theorem	68
P. Deligne	
LE GROUPE FONDAMENTAL DE LA DROITE PROJECTIVE MOINS	
TROIS POINTS	79
0. Terminologie et notations	87
1. Motifs mixtes	89
2. Exemples	105
3. Torseurs sous $\mathbf{Z}(n)$	112
4. Rappels sur les Ind-objets	127
5. Géométrie algébrique dans une catégorie tannakienne	132

6. Le groupe fondamental d'une catégorie tannakienne	141
7. Géométrie algébrique dans la catégorie tannakienne des systèmes de réalisations: interprétations	147
8. Extensions itérées de motifs de Tate	163
9. Rappels sur les groupes unipotents	175
10. Théories du π_1	179
Groupoïdes	179
Théorie classique	183
Théorie profinie	187
Théorie algébrique	193
11. Le Frobenius cristallin du π_1 de Rham	204
12. La filtration de Hodge du π_1	212
13. Le π_1 motivique	220
14. Exemple: le π_1 motivique de \mathbf{G}_m	225
15. Points bases à l'infini	229
Théorie classique	231
Théorie profinie	237
Théorie algébrique	242
Compatibilités	246
Théorie motivique	252
16. \mathbf{P}^1 moins trois points: un quotient de π_1 motivique	255
17. Relations de distribution: voie géométrique	270
18. Le torseur $P_{d,k} + (-1)^k \in P_{d,k}$ est de torsion: voie géométrique	277
19. Comparaison des $\mathbf{Z}(h)$ -torseurs des paragraphes 3 et 16	283
Index des notations	293

Y. Ihara

THE GALOIS REPRESENTATION ARISING FROM $\mathbf{P}^1 - \{0, 1, \infty\}$ AND TATE TWISTS OF EVEN DEGREE	299
1. Preliminaries and statement of the Theorem	300
2. Reducing the proof of the Theorem to two key lemmas	304
3. Proof of Key Lemma A	307
4. Proof of Key Lemma B	309
5. Remarks and discussion	310

U. Jannsen

ON THE ℓ -ADIC COHOMOLOGY OF VARIETIES OVER NUMBER FIELDS

AND ITS GALOIS COHOMOLOGY	315
1. The basic conjecture	317
2. Connections with algebraic K -theory	322
3. Connections with Iwasawa theory	329
4. Global results	335
5. The local case	341
6. The case $n \leq i + 1 \leq 2n$	349
7. The case $i = 1$: abelian varieties	353

B. H. Matzat

RATIONALITY CRITERIA FOR GALOIS EXTENSIONS 361

1. Fundamental groups	363
2. Class numbers of generators	365
3. Topological automorphisms	369
4. Braids	374
5. Braids and topological automorphisms together	378

B. Mazur

DEFORMING GALOIS REPRESENTATIONS 385

1. Universal deformation of representations	387
1.1 Deformations	387
1.2 Existence of universal deformation rings	388
1.3 Functoriality	392
1.4 One-dimensional representations	396
1.5 The duality involution	398
1.6 Obstructions	398
1.7 Ordinary representations	400
1.8 Schur-type results	401
1.9 A few simple examples	403
1.10 Global Galois representations	404
1.11 Remarks on Galois representations to $SL_2(\mathbb{F}_p)$	406
1.12 Neat residual representations	407
1.13 Neat S_3 -extensions of \mathbb{Q}	408
2. The internal structure of universal deformation spaces	411
2.1 General glossary	411
2.2 Special dihedral representations	414

2.3 The origin	415
2.4 The globally dihedral locus	416
2.5 The ordinary locus	417
2.6 The inertially reducible locus	422
2.7 The inertially metabelian and the inertially dihedral locus . . .	425
2.8 Loci of constant p -adic Hodge type	430

K. Wingberg

GALOIS GROUPS OF POINCARÉ TYPE OVER ALGEBRAIC NUMBER

FIELDS	439
1. The function field case	439
2. Classification of Demuškin groups	440
3. p -adic number fields	441
4. n -local fields	442
5. The absolute Galois group of a p -adic number field	442
6. Global number fields	445
