

## TABLE OF CONTENTS

Preface	v
On the model theory of free metabelian groups of bounded exponent A. Baudisch	1
D.O.P and n-tuples of models E. Bouscaren	11
Algebra and model theory of chain fields: an overview M. A. Dickmann	29
A Lefschetz principle for integral closures A. Macintyre	53
The $C^*$ -algebras of three-valued logic D. Mundici	61
Some problems and results in the theory of actually computable functions W. Maass, T.A. Slaman	79
Kleene-spaces D. Normann	91
On bounded time Turing reducibility on the recursive sets T.A. Slaman	111
The $\Pi_2^1$ -singleton conjecture: an introduction S. Friedman	113
The descriptive set theory of $\sigma$ -ideals of compact sets A.S. Kechris	117
Solving equation in lambda-calculus C. Böhm, A. Piperno, E. Tronci	139
Comparative logics and abelian $l$ -groups E. Casari	161
Finitary inductively presented logics S. Feferman	191
Geometry of interaction 1: interpretation of system <b>F</b> J. Y. Girard	221

Intuitionistic formal spaces and their neighbourhood G. Sambin	261
Probabilistic models R. Chuaqui	287
Logical partial functions and extension of equational logic W. Craig	319
Panel discussion on: TRENDS IN LOGIC	
Relation with computer science M. Davis	357
Some remarks S. Feferman	361
Trends in logic A. Macintyre	365
Remarks concerning the comments of A. Macintyre V. Harnik	369
Remarks on logic in mathematics and in computer science G. Longo	371
Comments in the panel discussion on trends in logic A. Ranta	375
Concluding remarks in the panel discussion Y.N. Moschovakis	377
Panel discussion on: THE TEACHING OF LOGIC	
The teaching of logic C. Bernardi	381
Teaching the incompleteness theorem M. Davis	385
LTF - a logic teaching framework D. J. Watt	393
