CONTENTS

Vol. 1.1, pp. 1-374

Preface

Section I

Approximation Theory

pp. 1-66

Enclosure methods and scientific computation	3
E. Adams	
Numerical solutions of X and Y equations with perturbations	33
B. Cahlon	
On the nonlinear Jeffcott equations	39
R.A. Zalik	
Mean convergence of a product rule to evaluate the finite Hilbert transform	43
G. Criscuolo and G. Mastroianni	
Applications of group theory in computation - A survey	47
W.F. Ames	
Accurate error bounds for integral equations	57
P. Linz	
Deterministic approach to the equations of motion for a die	61
C. Knudsen, R. Feldberg, M. Hindsholm and E. Mosekilde	

Section II

Linear and Nonlinear Waves

pp. 67-122

Generation of invariance theorems for nonlinear boundary-value problems in shallow water theory: An application of MACSYMA	69
C. Rogers	
Stability thermodynamics and discontinuity waves for hyperbolic systems with a convex extension	75
T. Ruggeri	
Practical stability and stochastic point processes	81
B. Adams, E. Adams and H. Spreuer	
Pseudopotentials for nonlinear evolution equations in 2 + 1 dimensions (tables)	91
M.C. Nucci	
Nonlinear waves propagating into a non-constant state	97
C. Currò and A. Donato	
Recent contributions to wave propagation in nonlinear dissipative media	101
D. Fusco and N. Manganaro	
Differential equations with quadratic nonlinearities	107
J.V. Herod	

Contents

Secondary bifurcation in the Belousov-Zhabotinskii chemical reaction N.N. Greenbaun	113
A solution model for microwave absorption in DNA V. Muto, J. Halding, P.L. Christiansen and A.C. Scott	119
<i>Section III</i>	
Computational Fluid Dynamics	
pp. 123-230	
Multigrid, the rotated hybrid scheme and the fast adaptive composite grid method for planar cavity flow C. Liu and S. McCormick	125
Strong solutions for non-homogeneous incompressible flows J. Simon	133
Viscous flow around airfoils R.R. Leben and K.E. Gustafson	139
Flame propagation computations with Chebyshev methods U. Ehrenstein, H. Guillard and R. Peyret	145
Calculation of the detailed structure of premixed and non-premixed flame fronts and some applications J. Warnatz and U. Maas	151
Numerical analysis of strained premixed CH ₄ -air flames with detailed chemistry B. Rogg	159
Adaptive finite-element investigations of two-dimensional compressible reactive flows F. Benkhaldoun, A. Dervieux and B. Larrouturou	169
Application of the Navier-Stokes equations to wings and complex configurations using a zonal approach J. Flores	175
Three-dimensional incompressible Navier-Stokes computations of internal flows D. Kwak, L.L.C. Chang, S.E. Rogers and M. Rosenfeld	181
Optimal trajectories for flight in a windshear: Take-off, abort landing and penetration landing A. Miele and T. Wang	187
Optimal trajectories for hypervelocity flight: Coplanar case and noncoplanar case A. Miele and W.Y. Lee	199
Subsonic airfoil design with mixed boundary conditions Z.D. Qiao	209
High-speed flow calculations past 3-D configurations based on the Reynolds averaged Navier-Stokes equations D.S. Chaussee	213
Incompressible vortex flows: Non-uniqueness and hysteresis L. Fuchs	219
On computational fluid dynamics at the DFVLR W. Kordulla and N. Kroll	225
Flow visualization as a challenge to and as a reference for computer modellers P. Freymuth	231

Contents

Hybrid Eulerian and Lagrangian approach in spray combustion using finite element methods S.K. Lee and T.J. Chung	237
A Lagrangian moving grid scheme for one-dimensional evolutionary partial differential equations J.G. Blom, J.M. Sanz-Serna and J.G. Verwer	247
Analysis of the Turkel-Zwas scheme for the shallow-water equations B. Neta	257
A theory for computational vortex dynamics K. Gustafson	265
Laminar wake of forced transversally moving circular cylinders Y. Leconte and J. Piquet	271

Section IV

Chaos and Fractals

pp. 279-314

Strange attractors in dynamical economics H.-W. Lorenz	281
Unification of some simple chaotic models P.A. Cook and K. Khan	287
Identification of chaos during the oxidation of CO on Pt/Al ₂ O ₃ in an adiabatic fixed-bed reactor H.U. Onken and E. Wicke	291
Excitation and annihilation in the Fitzhugh-Nagumo equations M. Brøns	297
Towards unified analysis of autonomous chaotic electronic circuits M.J. Ogorzalek	303
Sources of chaos in mechanical machines I. Grabec	309

Section V

Computational Acoustics and Helmholtz Problems

pp. 315-374

Numerical computations of acoustic propagation through three-dimensional ocean eddies D. Lee, G. Botseas, W.L. Siegmann and A.R. Robinson	317
Derivation and discretization of parabolic equations containing arbitrary density functions G.H. Knightly, D.F. St. Mary and D. Lee	323
Analysis of the accuracy of a computational method for the parabolic wave equation G.H. Knightly, D.F. St. Mary and D. Lee	329
Applications of Gaussian beam tracing to two-and three-dimensional problems in ocean acoustics M.P. Porter and H.P. Bucker	335
A wide-angle range refraction parabolic wave equation H.-J. Yang	341

Contents

Time domain parabolic-like equation with application to moving source in an inhomogeneous medium M.K. Kuo and H.Y. Yang	347
Symbol analysis and the one-way Helmholtz equation L. Fishman	353
The numerical solution of exterior Helmholtz problems C.I. Goldstein and L. Wang	359
An efficient grid numerical method for solving inverse scattering problems for the Helmholtz equation Y.M. Chen, L. Wang and C.I. Goldstein	365
GSPT inversion algorithm for history matching in 3-D 2-phase simulator Y.M. Chen, J.P. Zhu, W.H. Chen and M.L. Wasserman	369

CONTENTS

Vol. 1.2, pp. 375-741

Section I

Numerical Algorithms

pp. 375-604

A note on recursive inversion formulas for block Toeplitz-like matrices E. Alvoni	377
The performance of iterative schemes involving matrix-matrix products on the DAP M.D. Levin and D.J. Evans	381
The AGE method and its variants W.S. Yousif and D.J. Evans	389
An additive decomposition method for the eigenvalue problem R. Alt and J.L. Blondel	395
Eigensolutions to large nonsymmetric matrices by Arnoldi - Tchebychev D. Ho	401
A Lyapunov-like methodology for solving systems of non-linear equations Z.R. Novaković	409
Rational interpolation on general data sets in \mathcal{C}^n A. Cuyt and B. Verdonk	415
Multivariate interpolation: A survey with regard to extrapolation M. Gasca and G. Mühlbach	431
On a general epsilon-algorithm C. Carstensen	437
A connection between the E-algorithm and the epsilon-algorithm B. Beckermann	443
Acceleration methods for sequences such that $\Delta S_n \approx \sum_{i=1}^{\infty} a_i g_i(n)$ A.C. Matos	447
Sufficient information for accelerating the convergence B. Germain-Bonne and A.M. Litovsky	453
Convergence acceleration of sequences of Padé approximants A. Draux	459

Contents

On the computation of special functions by using asymptotic expansions N.M. Temme	463
Numerical calculation of the Riemann zeta function and generalizations by means of the trapezoidal rule G. Allasia and R. Besenghi	467
Some recent results in uniform asymptotic expansions of special functions R. Wong	473
A study of the stability of a general class of differential equation methods K. Burrage	479
Basic theory and demonstration of computational singular perturbation for stiff equations S.H. Lam and D.A. Goussis	487
A deferred correction algorithm for nonlinear two-point boundary value problems J.R. Cash and M.H. Wright	493
New predictor corrector trapezoidal formulae for solving initial value problems B.B. Sanugi and D.J. Evans	499
On the generalized Riccati matrix differential equation. Exact, approximate solutions and error estimate L. Jódar and E. Navarro	507
Solving coupled Riccati differential systems appearing in singular control L. Jódar	513
Numerical solution of coupled Riccati equation via block-pulse functions T. Kitajima	519
Countable normed spaces and the h-p version of the finite element method Ben Qi Guo and I. Babuška	525
Two methods for the approximation of inhomogeneous essential boundary conditions by the p -version of the finite element method M. Suri	531
Explicit timemarching schemes with maximum stability for mixed hyperbolic/parabolic problems I.P.E. Kinnmark, D.J. Kirkner, V. Ravi and W.P. Clarke	573
Coupling spectral methods with finite element approximations for partial differential equations C. Bernardi	543
The use of smoothing techniques in the method of lines P.J. van der Houwen and B.P. Sommeijer	549
A computational method for general higher index nonlinear singular systems of differential equations S.L. Campbell	555
Singular systems: A survey of the recent research work M.A. Christodoulou and B.G. Mertzios	561
Computational geometry for design in singular systems F.L. Lewis	565
Effective preconditioning for the simultaneous evaluation of the smallest eigenpairs of sparse matrices F. Sartoretto , G. Pini and G. Gambolati	569
On a subproblem of trust region algorithms for constrained optimization Y. Yuan	573

Contents

The new formulations of minimum feedback arc set problem O. Nishihara, H. Kumamoto and K. Inoue	577
Incomplete Cholesky decomposition in the truncated Newton method L.C.W. Dixon and M. Mohseninia	581
Cut cost minimization in graph partitioning C. Roucairol and P. Hansen	585
An algorithm for inverting the Laplace transform using real and real sampled function values G. Giunta and A. Murli	589
On computing the abscissa of convergence of a Laplace transform function G. Giunta, G. Laccetti and M. Rizzardi	593
Bounds for the zeros of some special functions A. Laforgia	597
Fields of formal Laurent series and applications to some problems in numerical analysis J. Wimp	601
 <i>Section 2</i>	
Numerical Software	
pp. 605-668	
Error estimation in mathematical programming computation J. Abadie and F. Dekhli	607
Application of the CESTAC method to several problems of space mechanics J.C. Berges	613
Theoretical study of CESTAC method and ADA implementation J.M. Chesneaux and Y. Salhi	617
A new machine providing accuracy of computations results B. Flavigny	623
Optimal termination criterion and optimal solution accuracy test in the Karmarkar's algorithm P. Tolla	629
Uncertainty in linear programming J.A. Bandoni and J.A. Romagnoli	635
Integration of symbolic and numerical computations in finite element analysis H.-Q. Tan	641
Numerical experiments with data reduction (DARE) methods for the solution of large linear systems on vector computers W. Schönauer, M. Schlichte and R. Weiss	647
On handling singular systems with interval Newton methods R. Baker Kearfott	653
A simulation method for error analysis in real time numeric algorithms V.V. Vujčić and Z.M. Ranić	657
Is it so simple to sum? N.J. Maille	661
Asynchronous and synchronous implementation of the CESTAC method in iterative algorithms J.-P. Faye	665

Contents

Section 3

Applications

pp. 669-735

First order design of a geodetic network as a constrained optimization problem L. Fortuna and G. Nunnari	671
A Petrov-Galerkin mixed finite element method with triangular elements for the semiconductor device equations J.J.H. Miller and S. Wang	677
Flow conforming iterative methods for convection dominated flows P.A. Farrell	681
Singular perturbation analysis of travelling waves for diffusive Lotka-Volterra competition models Y. Hosono	687
Solution of time-varying linear delay systems by rationalized Haar functions M. Ohkita and Y. Kobayashi	693
A kind of difference scheme for one dimensional parabolic system Chen Guangnan	699
A time-sharing iterative hybrid method for the solution of nonlinear parabolic differential equations Cao Dazhu, J. Min and H. Ping	705
Bessel functions with a non-constant order as eigenfunctions of the time-rescaled Gaussian processes C. Maccone	711
An eigenvector solution for multilevel linear-quadratic Stackelberg games H. Abou-Kandil	719
Navier-Stokes solutions by spectral multi-domain decomposition and finite element preconditioning: Application to thermal convection P. Demaret, M. Deville and G. Schneidesch	725
Spectral multidomain methods for hyperbolic systems D.A. Kopriva	729
Continuous finite element in space and time for the heat equation P. Monk	733
Author Index	737
