

Table of Contents

| | |
|---|-----|
| What is structural complexity theory? | |
| R. V. Book | 1 |
| Constructing oracles by lower bound techniques for circuits | |
| Ker-I Ko..... | 30 |
| Randomness, tally sets, and complexity classes | |
| Tang Shouwen | 77 |
| On one-way functions | |
| O. Watanabe | 98 |
| A new lower bound for parity circuits | |
| Du Dingzhu | 132 |
| How to design round Robin schedules | |
| F. K. Hwang | 142 |
| Bandwidth in multigrids for random graphs | |
| Z. Miller | 161 |
| A flavor of matroids, graphs and optimal job assignment problems in operations research | |
| J. M. S. Simões-Pereira | 173 |
| Algorithms for polymatroid optimization | |
| Wang Zhemin | 191 |
| Free partially commutative groups | |
| C. Wrathall | 195 |
| Some results on VLSI parallel algorithms | |
| Xu Meirui, Zhao Dongyue and Liu Xiaolin | 217 |
| On optimal arrangement of 12 points | |
| Yao Tianxing | 229 |
| Some discussions on vehicle routing problems | |
| Yu Wenci | 235 |
