## CHAPTER 1: MATHEMATICAL ASPECTS OF MULTIWAY DATA ARRAYS

<b>Coppi R., Critchley F.</b>	
<i>An introduction</i>	3
<b>Kruskal J. B.</b>	
<i>Rank, decomposition, and uniqueness for 3-way and N-way arrays</i>	7
<b>Franc A.</b>	
<i>Multiway matrices: some algebraic remarks</i>	19
<b>Denis J.B., Dhorne T.</b>	
<i>Orthogonal tensor decomposition of 3-way tables</i>	31
<b>d'Aubigny G., Polit E.</b>	
<i>Some optimality properties of the generalization of the Tucker method to the analysis of n-way tables with specified metrics</i>	39
<b>ten Berge J.M.F.</b>	
<i>Convergence of PARAFAC preprocessing procedures and the Deming-Stephan method of iterative proportional fitting</i>	53
<b>Leclerc B.</b>	
<i>Consensus approaches for multiple categorical or relational data</i>	65

CHAPTER 2: RELATIONSHIPS AND COMPARISONS BETWEEN  
DIFFERENT TECHNIQUES OF ANALYSIS

<b>Coppi R., Heiser W.J.</b>	
<i>An introduction</i>	79
<b>Carlier A., Lavit C., Pages M., Pernin M.O., Turlot J.C.</b>	
<i>A comparative review of methods which handle a set of indexed data tables</i>	85
<b>Bove G., Di Ciaccio A.</b>	
<i>Comparisons among three factorial methods for analysing three-mode data</i>	103
<b>Kruskal J.B., Harshman R.A., Lundy M.E.</b>	
<i>How 3-MFA data can cause degenerate PARAFAC solutions, among other relationships</i>	115
<b>Lundy M.E., Harshman R.A., Kruskal J.B.</b>	
<i>A two-stage procedure incorporating good features of both trilinear and quadrilinear models</i>	123

<b>Hayashi C.</b>	
<i>Multiway data matrices and methods of quantification of qualitative data as strategy of data analysis</i>	131
<b>Rizzi A.</b>	
<i>On the synthesis of three way data matrices</i>	143
<b>Kiers H.A.L.</b>	
<i>INDSCAL for the analysis of categorical data</i>	155
<b>Kroonenberg P.M.</b>	
<i>Singular value decompositions of interactions in three-way contingency tables</i>	169
<b>van der Heijden P.G.M., Meijerink F.</b>	
<i>Generalized correspondence analysis of multi-way contingency tables and multi-way (super-)indicator matrices</i>	185
<b>Schektman Y.</b>	
<i>Inner products and association indices for analysing some multiway tables</i>	203

### CHAPTER 3: SYMMETRIC AND NON SYMMETRIC APPROACHES TO THE ANALYSIS OF STRUCTURED DATA MATRICES

<b>Bolasco S., Escoufier Y., Meulman J.</b>	
<i>An introduction</i>	215
<b>Gower J.C.</b>	
<i>Generalised canonical analysis</i>	221
<b>Meulman J.</b>	
<i>Distance analysis in reduced canonical spaces</i>	233
<b>van der Burg E., Dijksterhuis G.</b>	
<i>Nonlinear canonical correlation analysis of multiway data</i>	245
<b>Tijssen R., de Leeuw J.</b>	
<i>Multi-set nonlinear canonical correlation analysis via the Burt-matrix</i>	257
<b>Lafosse R.</b>	
<i>Proposal for a generalized canonical analysis</i>	269
<b>Escoufier B., Pages J.</b>	
<i>Multiple factor analysis: results of a three-year utilization</i>	277
<b>Takane Y.</b>	
<i>Ideal point discriminant analysis: implications for multiway data analysis</i>	287
<b>D'Ambra L., Lauro N.</b>	
<i>Non symmetrical analysis of three-way contingency tables</i>	301
<b>Nishisato S., Lawrence D.R.</b>	
<i>Dual scaling of multiway data matrices: several variants</i>	317
<b>Benali H., Escoufier B.</b>	
<i>Smooth factorial analysis and factorial analysis of local differences</i>	327
<b>Sabatier R., Lebreton J.D., Chessel D.</b>	
<i>Principal component analysis with instrumental variables as a tool for modelling composition data</i>	341

<b>Flores R.G.</b>	
<i>A simple, interactive method for cubic tables</i>	353
<b>Ramsay J.O.</b>	
<i>The analysis of replicated spatial functions of time</i>	363
<b>D'Alessio G.</b>	
<i>Multistep principal components analysis in the study of panel data</i>	375
<b>Amato V.</b>	
<i>Autoregressive process for three-way data matrices</i>	383

#### CHAPTER 4: MULTIDIMENSIONAL SCALING AND CLASSIFICATION TECHNIQUES

<b>Heiser W.J., Lauro N.</b>	
<i>An introduction</i>	393
<b>Heiser W.J.</b>	
<i>The city-block model for three-way multidimensional scaling</i>	395
<b>Winsberg S., Carroll J..D.</b>	
<i>A quasi-nonmetric method for multidimensional scaling of multi-way data via a restricted case of an extended INDSCAL model</i>	405
<b>De Soete G., Carroll J.D.</b>	
<i>Ultrametric tree representations of three-way three-mode data</i>	415
<b>Bellacicco A.</b>	
<i>Linear representation of clusters in multiway matrices</i>	427
<b>Ralambondrainy H.</b>	
<i>How to deal with categorical data using clustering methods</i>	435
<b>Chiodi M.</b>	
<i>The clustering of longitudinal multivariate data when time series are short</i>	445

#### CHAPTER 5: MODEL BASED APPROACHES

<b>Coppi R., Critchley F.</b>	
<i>An introduction</i>	457
<b>Carroll J.D., De Soete G., Pruzansky S.</b>	
<i>Fitting of the latent class model via iteratively reweighted least squares CANDECOMP with nonnegativity constraints</i>	463
<b>Rost J.</b>	
<i>Rasch model and latent class models for measuring change with ordinal variables</i>	473
<b>van de Pol F., Langeheine R.</b>	
<i>Mixed Markov models, Mover-Stayer models and the EM algorithm (with an application to labour market data from the Netherlands Socio-Economic Panel)</i>	485

<b>Croon M.</b>	
<i>The analysis of partial rankings by log-linear and latent-class models</i>	497
<b>Browne M.W.</b>	
<i>Relationships between an additive model and a multiplicative model for multitrait multimethod matrices</i>	507
<b>Patrizi G.</b>	
<i>Model based selection of data arrays for inferences on large surveys</i>	521
<b>Biggeri A., Braga M., Decarli A., Valsecchi M.G.</b>	
<i>Exploratory data analysis of multiway contingency tables: a regression diagnostics approach</i>	531
<b>Wansbeek T., Verhees J.</b>	
<i>Models for multidimensional matrices in econometrics and psychometrics</i>	543
