Deforming Surfaces

Contributors	ix
1. Modelling Deforming Surfaces	1
1.1 Modelling axisymmetric thin shells with LF-splines – A. Le Méhauté & Y. Correc	3
1.2 Approaches to modelling the mechanical properties of fabrics and the representation of fabrics as flexible surfaces using differential geometry – D.W. Lloyd, A.H. Norton & R. Postle	19
1.3 The complex buckling of textile fabrics and other flexible sheets – J.W.S. Hearle & J. Amirbayat	33
1.4 Stability of the Endeavour balloon – C.R. Calladine	59
1.5 The surface of steep unsteady water waves – D.H. Peregrine	63
1.6 Deforming surfaces and viscous sintering – H.K. Kuiken	75
2. The Deformation of Notional Surfaces	99
2.1 Contour dynamics/surgery – D.G. Dritschel	101
2.2 Stretching of line and surface elements in random velocity fields – I.T. Drummond & W.H.P. Münch	109
2.3 Moving surfaces in turbulent flows – J.C. Vassilicos & J.C.R. Hunt	127
3. Techniques for Analysing Deforming Interfaces	155
3.1 Fourier descriptions for measuring bubble motion and deformation – R.J. Perkins & K. Lunde	157

3.2 Extraction of spatial statistics from experimentally visualised cross-sections of a turbulent flame – T.C. Chew, R.E. Britter & K.N.C. Bray	195
3.3 Geometrical observations of turbulent density interfaces – J.M. Redondo & P.F. Linden	221
