

Contents

J. Schwermer:	Cohomology of arithmetic groups, automorphic forms and L-functions	1
N. Wallach:	Limit multiplicities in $L^2(\Gamma \backslash G)$	31
A. Ash – A. Borel:	Generalized modular symbols	57
S. Böcherer:	On Yoshida's theta lift	77
G. Harder:	Some results on the Eisenstein cohomology of arithmetic subgroups of GL_n	85
M. Harris:	Period invariants of Hilbert modular forms, I: Trilinear differential operators and L-functions	155
R.-P. Holzapfel:	An effective finiteness theorem for ball lattices	203
Y. Konno:	Unitary representations with nonzero multiplicities in $L^2(\Gamma \backslash G)$	237
J.-P. Labesse:	Signature des variétés modulaires de Hilbert et représentations diédrales	249
T. Oda:	The Riemann–Hodge period relation for Hilbert modular forms of weight 2	261
M. Reeder:	Modular symbols and the Steinberg representation	287
J. Rohlfs:	Lefschetz numbers for arithmetic groups	303
J. Rohlfs – B. Speh:	Boundary contributions to Lefschetz numbers for arithmetic groups I	315
S.P. Wang:	Embedding of Flensted–Jensen modules in $L^2(\Gamma \backslash G)$ in the noncompact case	333
	List of Talks	357
	List of Participants	358
