Preface

v

Invited Lectures

On a Mathematical Model for the Crystallization of Polymers D. Andreucci, A. Fasano, M. Primicerio	3
Remarks on New Mathematical Problems Arising in the Context of Information Technology A. Bensoussan	17
Time Division Multiple Access Systems and Matrix Decomposition R. E. Burkard	35
Fresh Breeze around the Ivory Tower – Current Trends in Austrian Higher Education S. Höllinger	47
Determination of the Transient Thermal Behaviour of Thyristors with Cooling Devices (abstract) H. Niessner	57
Mathematics for Industry A. B. Tayler	59
Mathematical Problems in Research at HILTI K. Weiss	71

Minisymposium: Steel Processing

Water Droplet Cooling of Galvanised Iron N. G. Barton	83
A Mathematical Model for the Calculation of Cooling Criteria for Round Bloom H. Holl, R. Scheidl, K. Schwaha	97
Automatic Secondary Cooling Control for the Continuous Casting Process of Steel E. Laitinen, S. Louhenkilpi, T. Männikkö, P. Neittaanmäki	109
Some Problems of Identification and Control Arising from Cooling Rolled Wires F. Tröltzsch	123

Minisymposium: Chemical Engineering

Numerical Simulation of Emulsion Liquid Membrane Permeation D. Auzinger, A. Ortner, Hj. Wacker, H. J. Bart, R. Marr	135
The Lay-out of Reactive Extractors H. J. Bart, R. Marr	147
The Simulation of a Co-Current Bubble Reactor H. Haario, I. Turunen	159
A Numerical Model for Calculation of a Counter Current Heat Exchanger F. Kokert, M. Leitner, L. Peer, Hj. Wacker	169

Contributed Lectures

Modelling Oxygen Supply in Spheroids of Tumor Cells H. Acker, J. Dehnhardt, T. Küpper, C. Rohner	181
On a Numerical Method for Variable Heat Flow through External Walls K. Audenaert, R. Van Keer	187
Optimization of a Solar Domestic Hot-Water System D. Auzinger, M. Bergmayr, W. Kapfer, B. Schürz, Hj. Wacker	193
The Fluttering of Fibres in Airspinning Processes M. Bäcker, H. Neunzert, S. Younis	197
A Numerical Model for Electromagnetic Casters O. Besson, J. Bourgeois, P.-A. Chevalier, J. Rappaz, R. Touzani	207
On Consistent Initialization of Differential-Algebraic Equations with Discontinuities L. Brüll, U. Pallaske	213
On the Generation of Optical Solitons J. Burzlaff	219
Mathematical Models for the Diffusion of Innovations V. Capasso, M. Zonno	225
Image Segmentation by Minimum Information Loss (abstract) R. Caselli, B. Forte	235
A Brief Mathematical Analysis of Electrochemical Machining Problems S. Christiansen	237
A Mathematical Model for the Production of Bimetallic Strip E. Comparini, C. Manni	243
Computing Guaranteed Error Bounds for Problems in Renewal Theory H.-J. Dobner	249

Threshold Accepting Algorithms for 0–1 Knapsack Problems G. Dueck, J. Wirsching	255
Digital Topology in Document Processing U. Eckhardt, G. Maderlechner	263
Modelling the Rheology of a Coal–Water Slurry A. Fasano, M. Primicerio	269
Nonorthogonal Expansions of Signals and Some of their Applications (abstract) H. G. Feichtinger, K. Gröchenig	275
Two–Phase Flow Methodology and Modelling A. D. Fitt	277
Maximum Expected Information (MEI) Discretization Method for Spatial Data Analysis (abstract) B. Forte, R. Mininni	283
Automatic Mesh Generation for 3D Domains with Application in Fluid Mechanics, Structures, Electrotechnics and Aerospace Problems P. L. George, F. Hecht, E. Saltel	285
Quality Control of Artificial Fabrics (abstract) P. Hackh	291
Developing a Unidimensional Simulation Model for Producing Silicon in an Electric Furnace S. A. Halvorsen, J. H. Downing, A. Schei	293
Numerical Study of the Nonlinear Barotropic Instability of Rossby Wave Motion P. F. Hodnett, W. M. O'Brien	299
The Method of Region Analysis and its Application for Optimal Control Problems of Hydroelectric Power Plants Hoáng X. P.	309
Stochastic Modelling of the Dielectric Relaxation in Condensed Matter (abstract) A. Janicki, A. Weron, K. Weron	315
A Calculation and Contour Plotting System for Flame Temperatures S. B. Jones	317
On the Taper Curves in the Forest Industry A. Lahtinen	323
Analytical Three–Dimensional Stress Distribution in the Healthy Hip Joint S. Mazzullo, T. Simonazzi, D. Tartari	329
Torsional Vibrations in a Crank Shaft J. Molenaar	337
An Adaptive Finite Element Method for Stefan Problems R. H. Nochetto, M. Paolini, C. Verdi	347

The Theoretical Ecology of Coccidia with Reference to Poultry Production S. Parry, M. E. J. Barratt, S. Jones, S. McKee, J. D. Murray	353
A Dynamic Two-Phase Flow Model for a Purification Plant W. Prager, G. Propst	361
Exchange of Parametric Curve and Surface Geometry between Computer Aided Design Systems M. J. Pratt, R. J. Goult, M. A. Lachance	367
Fairing of Ship Lines with Mechanical Splines K.-D. Reinsch	379
Numerical Simulation of the Stretching Behavior of Polymeric Liquids by Nonlinear Volterra Integrodifferential Equations with Boundary Conditions W. Schmidt	385
3-D-Fitting of Blades and Vanes P. Schmidtke, D. Windelberg	391
Development of a Method for Electrical Load Forecasting and its Implementation Using Expert System Techniques A. Scully	397
Fibre Drying L. Terrill	403
Optimal Extension of a System of Hydro Energy Storage Plants Hj. Wacker, E. Czapka, A. Gangl, J. Gutenberger	409
Modelling Separated Flows P. Wilmott	415
On the Impact of Rigid Bodies with Small Deadrise Angle onto Inviscid, Incompressible Fluid S. K. Wilson	423
B-Spline Library for Mathematical Modelling and Solving of Scientific and Industrial Problems A. M. Ytrehus	429
