

Contents

Preface	iii
Contributors	xi
Part I Structured Populations	
1 Analysis of a Cell Population Model with Unequal Division and Random Transition <i>Ovide Arino, Marek Kimmel, and Martin Zerner</i>	3
2 Slow Oscillations in a Model of Cell Population Dynamics <i>Ovide Arino and Abdessamad Mortabit</i>	13
3 Competing Size-Structured Species <i>J. M. Cushing</i>	27
4 Quiescence in Structured Population Dynamics: Applications to Tumor Growth <i>Mats Gyllenberg and Glenn F. Webb</i>	45
5 Altruistic Population Model with Sex Differences <i>Ying-Hen Hsieh</i>	63
6 Remarks on an Epidemic Model with Age Structure <i>Michel Langlais</i>	75
7 Effect of Reducibility on the Deterministic Spread of Infection in a Heterogeneous Population <i>John Radcliffe and Linda Rass</i>	93

- 8** Analysis of Age-Structured Population Models with an Additional Structure 115
Horst R. Thieme
- 9** Mathematical Modeling of Cell Population Dynamics as Applied to the Study of Cellular Aging: A Review and Open Questions 127
Matthew Witten
- 10** What Can the Theory of Positive Operators Do for You? 155
Martin Zerner

Part II Ordinary and Partial Differential Equations Models

- 11** Population Models with State-Dependent Delays 165
Jacques Bélair
- 12** Generalized Lyapunov Methods for Interactive Systems in Biology 177
W. E. Fitzgibbon, J. J. Morgan, and S. J. Waggoner
- 13** Production, Development, and Maturation of Red Blood Cells: A Mathematical Model 189
Annette Grabosch and Henk J. A. M. Heijmans
- 14** The Effect of Rapid Oscillations in the Dynamics of Delay Equations 211
Jack K. Hale and Sjoerd M. Verduyn Lunel
- 15** Controllability of Nonlinear Systems with Application to Analysis of Population Dynamics 217
Jerzy Klamka
- 16** Invariant Manifolds for Partial Functional Differential Equations 223
Margaret C. Memory
- 17** Competition in a Modified Gradostat 233
Hal L. Smith
- 18** S-Domain Modeling of Neoplastic Cells Circulation in Mice 245
Andrzej Świerniak, Zdzisław Duda, and Janusz S. Skierski
- 19** Generic Modeling of Population Dynamics with S-Systems: Exemplified with Even-Aged Stands of Loblolly Pine (*Pinus taeda*) 261
Eberhard O. Voit

Part III AIDS and the Theory of Epidemics

- 20** Modeling Chagas's Disease: Variable Population Size and Demographic Implications 283
Stavros N. Busenberg and Cristobal Vargas
- 21** Mixing Patterns in Models of AIDS 297
Kenneth L. Cooke, Donald A. Allers, and Carlos Castillo-Chavez

- 22** Impact of Sexual Behavior Structures on the Transmission Dynamics of HIV in Closed Homosexual Communities 311
Sunetra Gupta and Roy M. Anderson
- 23** Methods for Numerically Specifying a Dynamic Stochastic Model of an AIDS Epidemic in a Heterosexual Population 329
Charles J. Mode
- 24** Stochastic Model for the AIDS Epidemic in a Homosexual Population 347
Wai-Yuan Tan and H. Hsu
- 25** AIDS: Modeling the Mature Epidemic in the Gay Community 371
James R. Thompson and Kerry W. Go

Part IV Stochastic Models

- 26** Screening for Cancer in Relation to the Natural History of the Disease 383
Betty J. Flehinger and Marek Kimmel
- 27** Distinguishing Between Single- and Multiple-Hazard Random Processes in Small Samples 391
Bart K. Holland
- 28** Estimation of Growth and Metastatic Rates of Primary Breast Cancer 397
John P. Klein and Robert Bartoszyński
- 29** Dynamics of a Cellular Automaton with Randomly Distributed Elements 413
Mario Markus
- 30** Stochastic Model to Explain the Biology and Epidemiology of the Ultraviolet Induction of Skin Cancer 435
Dennis K. Pearl
- 31** Multiple-Pathway Model of Carcinogenesis Involving One- and Two-Stage Models 469
Wai-Yuan Tan and Chao W. Chen
- 32** SIMEST: Technique for Model Aggregation with Considerations of Chaos 483
James R. Thompson, David N. Stivers, and Katherine Bennett Ensor
- 33** Statistical Modeling of T-Helper (T4) Cells: Application of Nonparametric Density Estimation 511
Ting Yang and Neil Dubin

Part V Cell Cycle Kinetics

- 34** Regularized Estimates of Cell Cycle Parameters in Populations Affected by Loss from Flow-Cytometry Data 523
Alessandro Bertuzzi, Alberto Gandolfi, and Giuseppe Starace

35	Conjectures on the Mathematics of the Cell Cycle <i>Stephen Cooper</i>	539
36	Cell Size Control by Modulation of the Growth Rate of Individual Mammalian Cells <i>Marek Hola</i>	547
37	Evolution of Ideas About Bacterial Growth and Their Pertinence to Higher Cells <i>Arthur L. Koch</i>	561
38	Simulation of Streptococcal Population Dynamics: Desynchronization and Balanced Size Distributions <i>Arthur L. Koch and Michael L. Higgins</i>	577
39	Effects of the Variability of Cell Cycle Durations on Labeling Experiments <i>Mitchelle S. Morrison and Eberhard O. Voit</i>	593
40	Two-Subcycle Cell Cycle Model <i>Roland Sennerstam</i>	609

Part VI Proliferation and Tumor Growth

41	Diffusion Models of Prevascular and Vascular Tumor Growth: A Review <i>John A. Adam</i>	625
	Appendix: Effects of Nonuniform Nutrient Consumption and Nonuniform Inhibitor Production on the Prevascular Growth of a Spherical Carcinoma <i>Sophia A. Maggelakis</i>	642
42	Approaches to Modeling Kinetics of Colony-Forming Experiments <i>Thomas Kuczek</i>	653
43	Application of a Three-Phase Growth Model Based on Stochastic Learning at the Cellular Level to Human Cancer Growth <i>Irwin Nathan</i>	659
44	Partial Hemopoietic Chimerism Described by Means of a Mathematical Model of the Erythroid Pathway <i>A. van Rotterdam, Jenne J. Wielenga, and Gerard Wagemaker</i>	679
45	Simulation Studies on the Regrowth of Acute Myeloid Leukemia After Autologous Bone Marrow Transplantation <i>Frank W. Schultz and Anton Hagenbeek</i>	689

Part VII Genetics and Molecular Biology

46	Colony Size Heritability: A New Parameter for Characterizing Proliferating Populations of Normal and Tumor Cells <i>David E. Axelrod, Elizabeth Milcos-Livanos, and Neha I. Vibhakar</i>	713
-----------	---	-----

47	Effects of Selection and Mutations on the Probabilities of Identity Between Genes in Small Populations <i>Michel Gillois</i>	723
48	Comparison of Two Models for Initiation of Replication in <i>Escherichia coli</i> <i>Joseph M. Mahaffy and Judith W. Zyskind</i>	747
49	Quantitative Shift Model and Generation of Single-Cell Heterogeneity <i>Jerry A. Peterson</i>	767
	Index	781
