

Contents

1	Topology, computer science, and the mathematics of convergence	
	<i>A. W. Roscoe</i>	
1.1	Introduction	1
1.2	Proving properties of fixed points	5
1.3	Induction over state-spaces	12
1.4	Conclusions	25
2	The soundness and completeness of axioms for CSP processes	
	<i>Stephen Blamey</i>	
2.1	Introduction	29
2.2	The classic failures model	30
2.3	The infinitary model	37
3	Classifying unbounded nondeterminism in CSP	
	<i>Geoff Barrett and Michael Goldsmith</i>	
3.1	Introduction: unboundedly nondeterministic CSP	57
3.2	Predeterministic processes	60
3.3	Restriction and the metric space	63
3.4	Topological properties of process implementations	66
3.5	The branching order of closed processes	69
3.6	Conclusions	74
4	Algebraic posets, algebraic cpo's and models of concurrency	
	<i>Michael W. Mislove</i>	
4.1	Introduction	75
4.2	Algebraic posets and algebraic cpo's	77
4.3	A trace semantics for CSP	88
4.4	A failures model for CSP	96
4.5	Making hiding continuous	101
4.6	Summary	109
5	Concurrency semantics based on metric domain equations	
	<i>J. W. de Bakker and J. J. M. M. Rutten</i>	
5.1	Introduction	113

5.2	Metric spaces and domain equations	116
5.3	Concurrency semantics	123
5.4	Labelled transition systems and bisimulation	146
6	On topological characterization of behavioural properties	
	<i>Marta Z. Kwiatkowska</i>	
6.1	Introduction	153
6.2	Notation and basic notions	155
6.3	The domain of traces	157
6.4	Asynchronous transition systems	159
6.5	Non-interleaving semantics	164
6.6	Properties and systems	165
6.7	The ‘good’ and ‘bad’ things	166
6.8	Uniform behavioural properties	167
6.9	Safety properties in Σ	169
6.10	Liveness properties in Σ	171
6.11	Fairness properties	173
6.12	Conclusion	174
7	Order and strongly sober compactifications	
	<i>J. D. Lawson</i>	
7.1	Introduction	179
7.2	Compactly embeddable ordered spaces	180
7.3	Upper and lower semicontinuous functions	183
7.4	Quasi-uniform spaces	189
7.5	Strongly sober compactifications	193
7.6	The Künzi–Brümmer quasi-uniformity	196
7.7	Continuous posets	200
7.8	The Fell compactification	202
8	Totally bounded spaces and compact ordered spaces as domains of computation	
	<i>Michael B. Smyth</i>	
8.1	Introduction	207
8.2	Preliminaries	208
8.3	Totally bounded spaces	211
8.4	Compact ordered spaces	217
8.5	A generalized power domain	223
8.6	Discussion	226
9	A characterization of effective topological spaces II	
	<i>Dieter Spreen</i>	
9.1	Introduction	231

9.2	Strongly effective spaces	234
9.3	Mal'cev topologies	237
9.4	On compatibility	239
9.5	The domain case	245
9.6	The metric case	247
9.7	Effective operators	249
10	The importance of cardinality, separability, and compactness in computer science with an example from numerical signal analysis	
	<i>Klaus E. Grue</i>	
10.1	Introduction	257
10.2	An optimization problem	258
10.3	Further work	263
10.4	Conclusion	268
	Appendix An example from numerical signal analysis	269
11	Digital topology: a comparison of the graph-based and topological approaches	
	<i>T. Y. Kong and A. Rosenfeld</i>	
11.1	Introduction	273
11.2	Graph-based digital pictures; conventional digital pictures	274
11.3	Topological digital pictures	278
11.4	The fundamental group of a digital picture; continuous analogues of graph-based digital pictures	281
11.5	Graph-based equivalents of topological digital pictures	283
11.6	Khalimsky's Jordan curve theorem and a generalization	286
11.7	Concluding remarks	287
12	Tiling the plane with one tile	
	<i>D. Girault-Beauquier and M. Nivat</i>	
12.1	Introduction	291
12.2	Preliminaries	293
12.3	Combinatorics and curves	300
12.4	Tilings	304
12.5	Half-periodicity	309
12.6	Surroundings of exact tiles	330
13	An algebraic axiomatization of linear logic models	
	<i>Narciso Martí-Oliet and José Meseguer</i>	
13.1	Introduction	335
13.2	Dualizing objects and linear categories	337
13.3	Linear logic models	340

13.4	Cancellative linear logic	341
13.5	Girard algebras and quantale models	346
13.6	Categorical combinators	351
13.7	Concluding remarks	351

14 Types as theories

Joseph A. Goguen

14.1	Introduction	357
14.2	Types as theories	361
14.3	Object-oriented concepts	373
14.4	Polymorphism is natural	379
14.5	Programming in the large	382
14.6	Summary	385
