

CONTENTS

Foreword	xi
Preface	xiii
The geometric calculus of variations and modelling natural phenomena	1
<i>Fred Almgren</i>	
Hyperbolic statistical analysis	7
<i>Jerry Donato</i>	
A crystallographic approach to 3-periodic minimal surfaces	15
<i>Elke Koch and Werner Fischer</i>	
The conformation of fluid vesicles	49
<i>D.M. Kroll and G. Gompper</i>	
Harmonic maps for bumpy metrics	57
<i>Libin Mou</i>	
Periodic surfaces that are extremal for energy functionals containing curvature functions	69
<i>Johannes C.C. Nitsche</i>	
The least gradient method for computing area-minimizing hypersurfaces ...	99
<i>Harold R. Parks</i>	
Modelling of homogeneous sinters and some generalizations of plateau's problem.....	117
<i>J. Christian Schön and Peter Salamon</i>	
A generalization of a theorem of Delaunay of constant mean curvature surfaces	123
<i>Brian Smyth</i>	
Willmore surfaces and computers	131
<i>Ivan Sterling</i>	
Difference versus Gaussian curvature energies; monolayer versus bilayer curvature energies; applications to vesicle stability	137
<i>Håkan Wennerström and David M. Anderson</i>
