

TABLE OF CONTENTS

L. Angermann (Dresden, Germany): <i>A modified error estimator of Babuška-Rheinboldt's type for singularly perturbed elliptic problems.</i>	1
I.P. Boglaev and V.V. Sirotkin (Chernogolovka, USSR): <i>A uniform iterative method for singular perturbation problems.</i>	13
V.F. Butuzov (Moscow, USSR): <i>Contrast structure solutions of nonlinear singularly perturbed equations.</i>	27
P.A. Farrell and R. Vulanović (Kent, USA and Novi Sad, Yugoslavia): <i>Analytic estimates and uniform numerical methods for multiple boundary turning point problems.</i>	33
A. Felgenhauer (Dresden, Germany): <i>Singularly perturbed problems with discontinuities and piecewise freezing discretization.</i>	39
L.S. Frank (Nijmegen, Netherlands): <i>Toeplitz matrices and the theory of one-parameter families of difference operators.</i>	47
E.C. Gartland, Jr. (Kent, USA): <i>On the stability of compact discretizations of singularly perturbed differential equations.</i>	63
C. Großmann and H.-G. Roos (Dresden, Germany): <i>Enclosing discretization for singular and singularly perturbed boundary value problems.</i>	71
G. Lube and D. Weiß (Magdeburg, Germany): <i>Galerkin/least-squares methods for singularly perturbed parabolic equations.</i>	83
E. O'Riordan, A. Hegarty and M. Stynes (Dundalk, Limerick and Cork, Ireland): <i>Construction and analysis of some exponentially upwinded finite element methods for singularly perturbed two-dimensional elliptic problems.</i>	91
E. Pfeifer (Dresden, Germany): <i>Generalized Taylor expansions and their application in numerical discretization.</i>	97
L. Ping (Nanjing, China): <i>Numerical method for an extremely ill-conditioned turning point problem.</i>	105
H.-J. Reinhardt (Siegen, Germany): <i>On adaptive numerical methods for singular perturbation problems.</i>	111
G.I. Shishkin (Sverdlovsk, USSR): <i>Grid approximation boundary value problem for singularly perturbed nonlinear elliptic equation.</i>	113
M. Stynes and W. Guo (Cork, Ireland): <i>Finite element analysis of an advection-diffusion equation.</i>	123
G. Sun (Cork, Ireland): <i>A finite element analysis of a selfadjoint two-point boundary value problem with boundary layers.</i>	129

K. Surla and D. Herceg (Novi Sad, Yugoslavia): ϵ -convergent difference scheme for nonlocal singularly perturbed problem.	135
K. Surla and Z. Uzelac (Novi Sad, Yugoslavia): The exponential spline collocation method for boundary value problems.	147
L. Tobiska (Magdeburg, Germany): A three-dimensional nonconforming finite element method of upstream type and its application to the Navier-Stokes equations.	155
A.B. Vasil'eva (Moscow, USSR): The contrast structures and the problem of their stability.	165
R. Vulcanović (Novi Sad, Yugoslavia): On numerical solution of a nonlinear singularly perturbed parabolic problem.	169
