

# TABLE OF CONTENTS

## I. USE OF SYMBOLIC LANGUAGES

### I.a. Mathematics

The symbolic computation of vector field expressions. R. Grossman, R. Larson ( <i>invited</i> ) .....	1
An Implementation of tools for graded Lie-algebras in Reduce. P.K.H. Gragert, G.H.M. Roelofs ( <i>invited</i> ) .....	11

### I.b. Systems

Computer Algebra Approaches to Enzyme Kinetics. J.P. Bennet, J.H. Davenport, M.C. Dewar, D.L. Fisher, M. Grinfeld, H.M. Sauro ( <i>invited</i> ) .....	23
Calcul formel pour la "poursuite singulière" de trajectoires. M.A. Fayaz.....	31
Using symbolic calculus for singularly perturbed nonlinear systems. J.P. Barbot, N. Pantalos.....	40
Calcul d'approximations de la solution d'un système non linéaire utilisant le logiciel Scratchpad. A. Martin.....	50
Scratchpad implementation of the local minimal realization of dynamic systems N.E. Oussous, M. Petitot.....	60

### I.c. Control

Poincaré's Linearization Method. Applied to the Design of Nonlinear Compensators. A. Krener, M. Hubbard, S. Karahan, A. Phelps, B. Maag ( <i>invited</i> ) .....	76
Program for Symbolic and Rule-Based Analysis and Design of Nonlinear Systems. J. Birk, M. Zeitz ( <i>invited</i> ).....	115
Algebraic computations for design of nonlinear control systems. O. Akhrif, G.L. Blankenship ( <i>invited</i> ) .....	129
Joint Use of Maple and Basile : Using Computer Algebra in a CACSD Environment. G. Le Vey, J. Masse .....	156
Computer algebra for nonlinear output feedback stabilization. R. Marino, P. Tomei ( <i>invited</i> ).....	165
Découplage des systèmes dynamiques non linéaires. V. Hoang Ngoc Minh .....	178
Utilisation du calcul formel pour l'étude et la commande des systèmes linéaires : approche transfert. A. Benamara, J.P. Guerin.....	191

## II. ALGEBRAIC METHODS

### II.a. Mathematics

Fast algorithms for structured matrices and interpolation.  
**G. Heinig**..... 200

Polynomial dynamical systems over finite fields.  
**M. Le Borgne, A. Benveniste, P. Le Guernic (invited)**..... 212

Computing with P.B.W. in enveloping algebras.  
**G. Duchamp, D. Krob**..... 223

### II.b. Systems

Rational computation in dioid algebra and its application to performance evaluation of Discrete Event Systems.  
**S. Gaubert, C. Klimann**..... 241

Intrinsic differential algebra.  
**J.F. Pommaret (invited)**..... 253

Truncated bilinear approximants : Carleman, finite Volterra, Padé-type, geometric and structural automata.  
**C. Hespel**..... 264

Generating series for analytic systems.  
**F. Rotella, I. Zambettakis**..... 279

Poincare normal form and Carleman linearization. (System of nonlinear ordinary differential equations).  
**J. Della Dora, L. Stolovitch (invited)**..... 288

Control Algorithms for Chaotic Systems.  
**E. Bradley**..... 307

Analytical method of solving the differential equations, describing a developing macroeconomical system that is under the influence of scientific and technical progress.  
**B.L. Kuchin, L.A. Ovcharov** ..... 326

### II.c. Control

Practical Computation of Accessibility, Controllability and Nilpotent Approximations.  
**M. Kawski**..... 334

Algebraic computing and linear system control.  
**P. Chenin (invited)**..... 346

Asymptotic Behaviour of Nash Strategy in Linear-Quadratic Games. A Computer Algebra Approach.  
**H. Abou-Kandil, G. Jank** ..... 354

Optimal pole placement by weight selection.  
**D. Mehdi, E. Ostertag** ..... 364

Algebraic computations for multi-delay systems analysis.  
**M. Szymkat**..... 375
