

# Contents

Preface	iii
Contributors	ix
Conference Program	xiii
Conference Participants	xvii
I. FINITE FIELD THEORY	
A Generalized Ore Transformation Applied to a Special Class of Polynomials over a Finite Field Simon J. Agou	3
Polynomial Functions on Matrices over a Finite Field Joel V. Brawley	15
Set-Complete Mappings on Finite Fields Wun-Seng Chou	33
Primitive Elements and Polynomials: Existence Results Stephen D. Cohen	43
Character Sums over Finite Fields R. J. Evans	57
On Inversive Congruential Generators for Pseudorandom Numbers Mary Flahive and Harald Niederreiter	75
A Special Class of Permutation Polynomials over Finite Fields Javier Gomez-Calderon	81
Polynomial Factorizations and Character Sum Identities John Greene	87
A Characterization of Some Minihypers and Codes Meeting the Griesmer Bound over $GF(q)$ , $q > 9$ N. Hamada and T. Hellesest	105

A New Family of Nonbinary Sequences with Large Linear Span Chulki Kim and John J. Komo	123
Permutation Polynomials over Finite Fields Gary L. Mullen	131
Recent Advances in the Theory of Finite Fields Harald Niederreiter	153
On Nonexistence of Generalized Bent Functions Dingyi Pei	165
Bent Permutations Josef Pieprzyk	173
An Ideal Structure for Some Quasi-Cyclic Error-Correcting Codes Roberta Evans Sabin	183
Periodicity Properties of $k$ th Order Linear Recurrences with Irreducible Characteristic Polynomial over a Finite Field Lawrence Somer	195
A $p$ -adic Lifting Lemma and Its Applications to Permutation Polynomials Daqing Wan	209
Algebraic Curves and Varieties over Finite Fields and Irreducible Cyclic Codes J. Wolfmann	217
<b>II. APPLICATIONS</b>	
Multiple Pulse Position Modulation with Generalized Constant Weight Codes G. E. Atkin and K. Fung	229
Performance Analysis of Distributed Deadlock-Detection Algorithms Omran Bukhres and Rajeev Moondhra	253
Suggestions for Quasi-Monte-Carlo Users Henri Faure	269
Watchman Routes for a Pair of Convex Polygons Laxmi P. Gewali and Rocky Lombardo	279
Block Source Coding over $GF(q)$ J. D. Gibson and S. A. McClellan	291
On the Structural Complexity of Sequences, Images, and Automata Ben Goertzel	307
Average Distance of Data Communicaton in Twisted Hypercubes Kyung Hee Kwon, Shahram Latifi, and Si-Qing Zheng	329
Linear Algebraic Structures of Algorithmic Mappings on Array Processors George Miel	341
Finite Fields and Cryptology Harald Niederreiter	359

Finite Fields, Pseudorandom Numbers, and Quasirandom Points Harald Niederreiter	375
An Application of Finite Field Theory to Computerized Tomography: A Spatial Limited Angle Model Pablo M. Salzberg	395
Tree Coding and IFS Fractals Matthew Varghese and Seshadri Mohan	403
Cryptography Using Complementing Subsets of Polynomials over Finite Fields William A. Webb	411
An Image Compression Algorithm and Its Implementation E. A. Yfantis, S. Baker, and G. M. Gallitano	417
III. OPEN PROBLEMS AND CONJECTURES	429
Josef Pieprzyk, Andrew Klapper, Daqing Wan, Thomas Hansen and Gary L. Mullen, H. Niederreiter, Stephen D. Cohen, Gary L. Mullen and Harald Niederreiter, J. F. Dillon	
Index	439
