Preface

J I Diaz

Symmetrization of nonlinear elliptic and parabolic problems and applications:
a particular overview 1

A Friedman

Elliptic and parabolic systems associated with semiconductor modeling 17

P Hess

On the asymptotically periodic Fisher equation 24

G H Knightly and D Sather

Time-periodic states in problems containing a structure parameter 34

H A Levine

Fujita type theorems for weakly coupled parabolic systems 43

S Pohozaev

On entire solutions of semilinear elliptic equations 56

J-F Rodrigues

Strong solutions for quasi-linear elliptic-parabolic problems with time-dependent
obstacles 70

G Talenti and F Tonani

Detecting subsurface gas sources 83

A Abakhti-Mchachti and J Fleckinger-Pellé

Existence of positive solutions for non cooperative semilinear elliptic system defined
on an unbounded domain 92

F Alabau

A decoupling method for proving uniqueness theorems for electro-diffusion equations 107

S Carl

An existence result for discontinuous elliptic equations under discontinuous nonlinear
flux conditions 120

| | |
|--|-----|
| M Barceló-Conesa A remark on quadratic growth of solutions for a class of fully nonlinear second order PDEs | 131 |
| V Ferone and M Rosaria Posteraro Symmetrization for a class of non-linear elliptic equations | 142 |
| F Abergel, D Hilhorst and F Issard-Roch On a Stefan problem with surface tension in the neighborhood of a stationary solution | 149 |
| B Kawohl On a class of singular elliptic equations | 156 |
| N Kenmochi, T Koyama and A Visintin On a class of variational inequalities with memory terms | 164 |
| N Kutev Global solvability and boundary gradient blow up for one dimensional parabolic equations | 176 |
| J Liang Weakly-coercive quasilinear elliptic equations with inhomogeneous measure data | 182 |
| G M Lieberman Existence of solutions to the first initial-boundary value problem for parabolic equations via elliptic regularization | 193 |
| J-P Lohéac Artificial boundary conditions for advection-diffusion equations | 207 |
| R Pütter Bounds for Neumann eigenvalues of n-dimensional balls and second eigenfunctions on ellipsoids | 220 |
| B Ruf Remarks on a superlinear Sturm–Liouville equation | 232 |
| N Svanstedt and J Wyller A numerical algorithm for the solution of the homogenized p-Poisson equation | 240 |
| G Sweers A sign-changing global minimizer on a convex domain | 251 |
| M A Vivaldi Oscillation and energy decay of solutions to obstacle problems involving quasi-linear, degenerate-elliptic operators | 259 |

J Von Below

An existence result for semilinear parabolic network equations with dynamical node conditions

274

Hong-Ming Yin

Remarks on regularity of the interface in the heat equation with strong absorption

284
