Introduction	1
Robert L. Bryant, An Introduction to Lie Groups and Symplectic Geometry	5
Introduction	7
Background Material and Basic Terminology	8
Lecture 1. Introduction: Symmetry and Differential Equations	13
Symmetry and conservation laws	13
Classical integration techniques	14
Lecture 2. Lie Groups and Lie Algebras	19
Lie groups	19
Lie algebras	30
Left-invariant forms and the structure equations	35
The 1-, 2-, and 3-dimensional Lie algebras	36
Exercises	41
Lecture 3. Group Actions on Manifolds	47
Lie group actions	47
Group actions and vector fields	53
Equations of Lie type	55
Appendix: Lie's transformation groups, I	61
Appendix: connections and curvature	63
Exercises	66
Lecture 4. Symmetries and Conservation Laws	71
Variational problems	71
Symmetries	75
Hamiltonian form	83
The cotangent bundle	85
Poincaré recurrence	86
Exercises	89
Lecture 5. Symplectic Manifolds, I	93
Symplectic Algebra	93
Symplectic Manifolds	97
Exercises	108
Lecture 6. Symplectic Manifolds, II	113

Obstructions	113
Deformations of symplectic structures	116
Submanifolds of symplectic manifolds	118
Appendix: Lie's transformation groups, II	122
Lie pseudo-groups	124
Exercises	125
Lecture 7. Classical Reduction	129
Symplectic group actions	129
The moment map	132
Reduction	134
Exercises	138
Lecture 8. Recent Applications of Reduction	143
Riemannian holonomy	143
Kähler manifolds and algebraic geometry	145
Kähler reduction	149
Hyperkähler manifolds	153
Exercises	160
Lecture 9. The Gromov School of Symplectic Geometry	163
Soft techniques in symplectic manifolds	163
Hard techniques in symplectic manifolds	167
Epilogue	174
Exercises	175
Bibliography	179
Jeffrey M. Rabin, Introduction to Quantum Field Theory for Mathematicians	183
Introduction	185
Acknowledgements	186
Lecture 1. Classical Mechanics	187
The Geometry of Hamiltonian Mechanics	192
Lecture 2. Classical Field Theory	195
Lecture 3. The Lorentz Group and Spinors	203
Lecture 4. Quantum Mechanics	209
Symmetries in Quantum Mechanics	213
Heisenberg Picture	213
Lecture 5. The Simple Harmonic Oscillator	215
Lecture 6. The Path Integral Formulation of Quantum Mechanics	219
Lecture 7. The Harmonic Oscillator via Path Integrals	227
Lecture 8. Quantum Field Theory: Free Fields	233
Axioms	239
The Dirac Field	241

Lecture 9. Interacting Fields, Feynman Diagrams, and Renormalization	245
Exercises	257
Self-adjointness and time evolution in quantum mechanics	257
Gaussian measure problems	259
Miscellaneous physical problems	264
Bibliography	269
Orlando Alvarez, Lectures on Quantum Mechanics and the Index Theorem	271
Introduction	273
References	274
Lecture 1. Canonical Quantization of Bosonic Systems	275
Lagrangian and Hamiltonian mechanics	275
Naive quantization	277
Noether's theorem	277
Review of the simple harmonic oscillator	278
Lecture 2. Canonical Quantization of Fermionic Systems	281
The basics	281
The fermionic oscillator	283
Quantization of fermionic systems	284
Clifford algebra fermions	287
Lecture 3. Supersymmetry	293
Getting spin 1/2 particles to move	293
The simplest supersymmetry	295
The Dirac equation on a manifold	298
Lecture 4. The Index of Operators	301
The basics	301
Supersymmetry and the index	301
Lecture 5. Path Integrals	303
Path integral for the simple harmonic oscillator	303
Theory of fermionic integration	309
Lecture 6. The Atiyah-Singer formula	311
Atiyah-Singer formula for the Dirac operator	311
Lecture 7. Global Topological Issues	319
Characteristic classes	319
Global properties of the path integral	321
Frank Quinn, Lectures on Axiomatic Topological Quantum Field Theory	323
Outline	326
Lecture 1. A rough idea	329

Lecture 2. Topological opportunities for TQFT	331
Lecture 3. The Euler theory	335
Euler characteristics	335
Lecture 4. Finite total homotopy TQFT	339
The skew theory	342
Witten's integral for finite gauge group	342
Calculations for finite groups	343
Lecture 5. Twisted finite homotopy TQFT	345
The answer	347
Calculations for finite groups	348
The construction	355
Induced homomorphisms	358
Dependence on the cocycle	360
The Chern-Simons TQFT	361
Lecture 6. Axioms	365
Definition of domain category	365
Examples	366
Bordism categories	368
Definition of TQFT	369
Examples	370
Lecture 7. Elementary structure	373
Pairings	373
Ambialgebras	378
Classification on surfaces and graphs	380
Lecture 8. Modular examples	383
The idea	383
The Euler theory	386
The finite total homotopy TQFT	387
The twisted finite homotopy TQFT	390
The endomorphism TQFT	393
Lecture 9. Modular axioms and structure	395
Modular domain categories	395
Modular bordisms and TQFT	397
The corner ambialgebras	398
Classification on surfaces	401
Module structures on $Z(Y)$	403
Nondegenerate pairings	404
The rank TQFT	405
Morita equivalence and rational conformal field theories	406
The Verlinde basis and link invariants	407
The structure of $Z(T^2)$	408
Lecture 10. Categorical constructions	411
Tensor categories	412

Semisimple tensor categories	413
Examples of finite semisimple tensor categories	414
Example: $SL(2) \bmod 5$	415
State modules	416
Glueing trees	417
The corner ambialgebra	419
State modules of graphs	420
Slices through 2-complexes	422
Beginning and ending a presentation	423
Beginning and ending a relation	423
The circulator	426
The Interchange	428
Doing the calculation	430
Extensions	431
Appendix A. Algebra	435
Tensor products	435
Pairings and traces	437
Ambialgebras	439
Examples of ambialgebras	442
Complex ambialgebras	447
Bibliography	451
