Preface

1. PHASE TRANSITION

S Benzoni-Gavage and D Serre
Compensated compactness for a class of hyperbolic systems of p conservation laws with $p \geq 3$ 3

N Kenmochi and M Niedzgodka
Large time behaviour of a nonlinear system for phase separation 12

C Lexcellent
Some remarks about thermodynamics of pseudoelasticity 23

E Patoor, A Eberhardt and M Berveiller
Micromechanical modelling of superelasticity in shape memory alloys 38

G Vallet
Mathematical modelisation of the phase change heat transfer in an emulsion 55

T Roubíček
Microstructure evolution models 67

2. EVOLUTION PROBLEMS, BIFURCATION, STABILITY

D Brochet
Maximal attractor and inertial sets for some second and fourth order phase field models 77

R Farwig
The weak Neumann problem and the Helmholtz decomposition in general aperture domains 86

J-C Saut
Normal form of Navier–Stokes equations with potential forces: old and new 97

C Z Xu, G Sallet and H Laousy
Spectrum and Riesz basis assignment of distributed parameter feedback systems 109

3. ELLIPTIC AND PARABOLIC PROBLEMS

F Alabau	
Uniqueness problems for drift-diffusion model for semiconductor devices	121
L Boccardo, T Gallouët and F Murat	
A unified presentation of two existence results for problems with natural growth	127
J Escher	
A note on quasilinear parabolic systems with dynamical boundary conditions	138
J K Hale and G Raugel	
Attractors and convergence of PDE on thin L-shaped domains	149
O A Isselkou	
Supercritical elliptic problems on domains of \mathbb{R}^N	172
T Mekkaoui and C Picard	
Error estimates for the homogenization of a quasilinear Dirichlet problem in a periodically perforated domain	185
A Simon	
An elliptic problem in \mathbb{R}^n with a small perturbation	194
J Simon	
Representation of distributions and explicit antiderivatives up to the boundary	201
P Wittbold	
Asymptotic behaviour of certain nonlinear evolution equations in L^1	216
