Preface . . . . .	ix
<b>1 Introduction</b>	
1.1 Symplectic Linear Algebra . . . . .	1
1.2 Symplectic Manifolds . . . . .	2
1.3 Hamiltonian Systems . . . . .	4
1.4 The Maslov Index . . . . .	7
<b>2 Darboux' Theorem and Examples of Symplectic Manifolds</b>	
2.1 The Theorem of Darboux . . . . .	17
2.2 The Cotangent Bundle . . . . .	22
2.3 Kähler Manifolds . . . . .	23
2.4 Coadjoint Orbits . . . . .	32
2.5 An Example: $\mathbb{C}P^n$ as a Symplectic Manifold . . . . .	40
<b>3 Generating Functions</b>	
3.1 Minimax Principle and Lusternik-Schnirelman Theory . . . . .	43
3.2 Lagrange submanifolds . . . . .	48
3.3 Generating functions . . . . .	49
3.4 The action functional considered as a generating function . . . . .	52
3.5 Critical points for generating functions . . . . .	56
3.6 Stabilization . . . . .	59
3.7 Symplectic diffeomorphisms of $\mathbf{R}^{2n}$ . . . . .	60
3.8 The Viterbo capacities . . . . .	63
<b>4 Symplectic Capacities</b>	
4.1 Existence of Periodic Solutions . . . . .	65
4.2 Symplectic Capacities . . . . .	73
<b>5 Floer Homology</b>	
5.1 Morse Homology and the Conley Index . . . . .	79
5.2 The Arnol'd Conjecture . . . . .	86
5.3 The Variational Setup . . . . .	88
5.4 Definition of Floer Homology . . . . .	91
5.5 Continuation of Floer Homology . . . . .	93
5.6 Floer Homology Equals Singular Homology . . . . .	95
5.7 Symplectic Homology . . . . .	97

## 6 Pseudoholomorphic Curves

6.1	Introduction . . . . .	99
6.1.1	Linear algebra of symplectic and almost complex structures . . . . .	99
6.1.2	Definition of pseudoholomorphic curves . . . . .	102
6.1.3	Regularity of holomorphic curves . . . . .	103
6.2	The Moduli Space of Holomorphic Curves . . . . .	104
6.2.1	The setting of global analysis . . . . .	104
6.2.2	The operator $\bar{\partial}_J$ and its linearization . . . . .	109
6.2.3	The moduli space at regular almost complex structures . . . . .	114
6.2.4	Comparison of moduli spaces at different complex structures . . . . .	119
6.3	Compactness of the Moduli Space . . . . .	119
6.3.1	A homological criterion for injectivity . . . . .	120
6.3.2	An apriori inequality . . . . .	126
6.3.3	Weak compactness . . . . .	135
6.3.4	Removing singularities . . . . .	138
6.3.5	A compactness and an existence result . . . . .	142
6.3.6	An application . . . . .	145

## 7 Gromov's Compactness Theorem from a Geometrical Point of View

7.1	Gromov-Schwarz Lemma, Monotonicity, Removing Singularities . . . . .	147
7.2	Deformation of Surfaces and Convergence of Hyperbolic Structures . . . . .	150
7.3	Gromov's Compactness Theorem . . . . .	155

## 8 Contact structures

8.1	Contact manifolds . . . . .	167
8.2	Symplectification . . . . .	173
8.3	Strictly pseudoconvex surfaces . . . . .	178
8.4	Contact structures on 3-manifolds . . . . .	182
8.4.1	Plane fields on 3-manifolds . . . . .	182
8.4.2	Invariant contact structures on the solid torus . . . . .	184
8.4.3	Martinet's theorem . . . . .	188

8.5	Two-dimensional surfaces in contact manifolds . . . . .	190
8.5.1	Germs of contact structures on 2-dimensional surfaces . . . . .	190
8.5.2	Invariants for curves in contact manifolds . . . . .	195
8.5.3	Index theorems for 2-dimensional surfaces . . . . .	199
8.5.4	Bennequin's inequality . . . . .	205
8.6	Holomorphic filling . . . . .	206
8.6.1	Bishop's theorem . . . . .	206
8.6.2	One-parameter families of holomorphic discs . . . . .	210
8.6.3	Fillable contact structures . . . . .	213
8.7	Eliashberg's classification of 3-dimensional contact structures . . . . .	217
<b>A Generalities on Homology and Cohomology</b>		
A.1	Axioms for homology . . . . .	220
A.2	Axioms for cohomology . . . . .	221
A.3	Homomorphisms of (co)homology sequences . . . . .	222
A.4	The (co)homology sequence of a triple . . . . .	222
A.5	Homotopy equivalence and contractibility . . . . .	224
A.6	Direct sums . . . . .	225
A.7	Triads . . . . .	225
A.8	Mayer-Vietoris sequence of a triad . . . . .	226
<b>References</b> . . . . .		229
<b>Index</b> . . . . .		237
