

CONTENTS

Adaptive algorithms for blind channel equalization by J.G. Proakis	1
Parallel DSP computations and direct product rings by N.M. Wigley, G.A. Jullien and D.J. Reaume	21
The Arithmetic Fourier Transform and its applications by W.J. Walker, J.L. Schiff and R.Y.Y. Woo	33
A coding theoretic approach to fault tolerant matrix decomposition and solution of linear systems of equations by P. Fitzpatrick	41
Automatic derivation of systolic algorithms for Kalman filtering by G.M. Megson and D. Comish	51
A redundant arithmetic CORDIC system with a unit scale factor by C.T. Clarke and G.R. Nudd	63
Neural networks and the VC dimension by S.B. Holden	73
Fractal approximation functions for image and signal coding by F. Dudbridge and D.M. Monro	85
Fast recursive least squares using the FFT by M.K. Ng and R.J. Plemmons	97
On the approximation character of some recursive identification schemes by P.A. Regalia and M. Mboup	131
Generalized split lattices for α -stationary processes by F. Desbouvries	143
Signal processing applications in astronomy by A.H. Greenaway	155
Removal of the water resonance from ^1H Magnetic Resonance spectra by A. van den Boogaart, D. van Ormondt, W.W.F. Pijnappel, R. de Beer and M. Ala-Korpela	175

Resolution improvement by minimum variance signal enhancement by S. van Huffel, C. Decanniere, H. Chen and P. van Hecke	197
Wavelet analysis of system response by J.G. Jones and G.H. Watson	209
Recent developments in maximum entropy and the design of FIR filters by R.N. Madan	221
A statistically based eigenanalysis method for frequency estimation by A. Eriksson, P. Stoica and T. Söderström	229
Fast algorithm for NTTs and other transforms by S. Boussakta and A.G.J. Holt	239
A class of quadratic least squares problems which are solvable without linearisation by A.J. Fenwick	257
On the use of cluster classification for channel equalisation at high signal to noise ratios by C.P. Callender and C.F.N. Cowan	267
AR model order selection using third-order statistics and predictive least-squares by A.K. Nandi and J.R. Dickie	285
Signal processing techniques for nearfield acoustic holography by L.A. Brown, J.A.G. Knight, A. Croft, M. Hargreaves and Ž. Štih	297
Parallel implementation of restricted parameter tracking by J. Kadlec, F.M.F. Gaston and G.W. Irwin	315
A geometric theory of locally optimum processing by J.W. Bond and S. Hui	327
The objective admission of Ockham's Razor by marginalization in Bayesian model-based inference by A. Quinn	339
Hardware implementation of a fast method for performing modular multiplication with applications to cryptography and DSP by R.N. Gorgui-Naguib and S.S. Dlay	359

Spectral analysis via the analytic continuation problem by D.Z. Arov, Y.I. Abramovich, J.F. Böhme and D. Maiwald	367
Root location and confinement for systems with annular uncertainties by F. Pérez, D. Docampo and C. Abdallah	375
Systolic second-order Kalman filters by F.M.F. Gaston	385
Nonstationary seismic data analysis by D. Maiwald, J.F. Böhme and A. Pérez Neira	397
Nonlinear signal processing by D.S. Broomhead	407
Fast regularised deconvolution in optics and radar by J.B. Abbis, J.C. Allen, R.P. Bocker and H.J. Whitehouse	421
