1 Multiple Wiener-Itô integrals: An introductory survey	1
<i>Christian Houdré, Víctor Pérez-Abreu and Ali Süleyman Üstünel</i>	
1.1 Introduction	1
1.2 Multiple Wiener-Itô integrals and chaos expansions	3
1.2.1 Introduction	3
1.2.2 Hu-Meyer formula and continuous extensions	4
1.2.3 Different approaches and multiple integrals for other processes	6
1.2.4 Chaos expansions	8
1.2.5 A survey of applications	9
1.2.6 Chaos expansions for other processes	11
1.3 Chaos random variables and processes	11
1.3.1 Introduction	11
1.3.2 Chaos random variables	12
1.3.3 Chaos stochastic processes	16
1.4 Anticipative stochastic calculus through chaos expansions	18
1.4.1 Stochastic integration for chaotic processes	19
1.4.2 Derivatives and Sobolev spaces of Wiener functionals	20
1.4.3 Another approach to anticipative calculus	22
1.4.4 The Ornstein Uhlenbeck operator	23
2 The Hu-Meyer formula. A view of the problem with special attention to the Poisson case	35
<i>Josep L. Solé and Frederic Utzet</i>	
2.1 The Wiener case	35
2.2 The Poisson case	39
2.3 The Wiener and the Poisson cases again	40
2.4 New directions	43

3	Remarks on the existence of k-traces	47
	<i>Gerald W. Johnson and Gopinath Kallianpur</i>	
3.1	Multiple Wiener-Itô integrals and k -traces	47
3.2	The existence of k -traces	51
3.2.1	$L^2([0, 2\pi])$	53
3.2.2	$L^2(\mathbb{R})$	60
3.2.3	$L^2([0, \infty))$	63
4	Multiple Wiener-Itô integrals and a multivariate version of Schoenberg's theorem	73
	<i>Olav Kallenberg</i>	
4.1	Schoenberg's theorem and rotatable arrays	73
4.2	Symmetries of multiple Wiener-Itô integrals	75
4.3	Representations of rotatable CLRFs	78
4.4	Exchangeable random fields	82
5	The state of decoupling: A survey	87
	<i>Jerzy Szulga</i>	
5.1	Basic notions	87
5.1.1	Notation	88
5.1.2	A bit of history	90
5.1.3	Special classes of random variables	92
5.2	Decoupling in a quasi-convex setting	100
5.2.1	Decoupling of homogeneous polynomials	101
5.2.2	The case of tails	103
5.2.3	Ramifications	104
5.2.4	Tetrahedral polynomials and geometry	110
5.2.5	Non-zero diagonals	112
5.2.6	Multiple integrals	114
5.3	Other types of decoupling	114
5.3.1	Tangent processes and decoupling	114
5.3.2	Non-integrable polynomials	116
5.3.3	Infinite order chaos	118
6	MWI expansions for functionals related to level-crossing counts	125
	<i>Eric V. Slud</i>	
6.1	Introduction	125
6.2	Multiple Wiener-Itô integral representations	128
6.3	Applications of the MWI expansion to crossing counts	133
6.3.1	Central limit theorems – weak-dependence case	133

6.3.2	Noncentral limit theorem	135
6.3.3	Crossings rates for mixed-spectrum Gaussian signals	136
6.4	Generalized random functions related to crossings	138
7	Scaling limits of solutions of Burgers' equation with singular Gaussian initial data	145
	<i>Donatas Surgailis and Wojbor A. Woyczyński</i>	
7.1	Preliminaries	145
7.2	Scaling limits	147
7.3	Spectra with discrete singularities	148
7.4	Spectra concentrated on lines	155
8	Weak convergence in dynamical systems to self-similar processes with time average representation	163
	<i>Michael T. Lacey</i>	
8.1	Introduction	163
8.2	Main results	165
8.3	$T: x \rightarrow 2x \bmod 1$	169
8.4	The general case	173
9	On exact tails for limiting distributions of U-statistics in the second Gaussian chaos	179
	<i>Peter Imkeller</i>	
9.1	Introduction	179
9.2	Notation and preliminaries	183
9.3	Positive tails	184
9.4	Negative tails	193
10	Limit theorems for empirical processes under dependence	205
	<i>Miguel A. Arcones and Bin Yu</i>	
10.1	Introduction	205
10.2	Empirical processes under mixing conditions	210
10.3	Empirical processes under long range dependence	211
10.4	The non-central limit theorem for M-estimators	215
11	Mixing for multiple Wiener-Itô integral processes	223
	<i>Daniel W. Chambers</i>	
11.1	Introduction	223
11.2	Background	225
11.3	Results	228

12 Zero-one laws for multiple stochastic integrals	233
<i>Jan Rosiński and Gennady Samorodnitsky</i>	
12.1 Introduction and notation	233
12.2 A survey of zero–one laws for infinitely divisible processes and measures	237
12.3 A survey of 0-1 laws for multiple integrals and multilinear forms	238
12.4 Zero-one laws for sums of multiple Lévy integrals under an atomlessness assumption	240
12.5 Centering multiple stochastic integrals	246
12.6 Applications to sample path properties	254
13 Continuity of some Gaussian chaoses	261
<i>Michael B. Marcus</i>	
13.1 Introduction and main result	261
14 Some formulas for anticipative Girsanov transformations	267
<i>Jorge A. León and Philip Protter</i>	
14.1 Introduction	267
14.2 Preliminaries	269
14.3 A result of Buckdahn interpreted through semimartingales . . .	270
14.4 An extension of Buckdahn’s result	274
14.5 The unbounded case	282
14.6 A counterexample	288
15 Absolute continuity of processes and a derivation rule	293
<i>María Emilia Caballero and Begoña Fernández</i>	
15.1 Introduction	293
15.2 Preliminaries	294
15.3 Absolute continuity of processes	296
15.4 Properties of a stochastic equation	301
15.5 Applications	308
16 Smoothness of local time and related Wiener functionals	317
<i>David Nualart and Josep Vives</i>	
16.1 Introduction	317
16.2 Sobolev spaces over the Wiener space	319
16.3 Smoothness of $\delta_x(W(h))$ using the Ornstein-Uhlenbeck semigroup	321
16.4 Smoothness of $\delta_x(W(h))$ using chaos expansions	322
16.5 Smoothness of Brownian local time	326

16.6	Smoothness of Brownian local time using chaos expansions . . .	329
16.7	Smoothness of the renormalized autointersection local time of the planar Brownian motion	331
17	Distributions on Wiener space and fluctuation limits of Poisson systems of Brownian bridges	337
	<i>Luis G. Gorostiza</i>	
17.1	Introduction	337
17.2	Notation and preliminaries	338
17.3	A nuclear Gelfand triple on Wiener space	340
17.4	Fluctuations of Poisson systems of Brownian bridges	341
18	Itô-Ramer, Skorohod and Ogawa integrals with respect to Gaussian processes and their interrelationship	349
	<i>Leszek Gawarecki and Vidyadhar Mandrekar</i>	
18.1	Introduction	349
18.2	Relation between Skorohod and Ogawa integrals	350
18.3	Itô-Ramer integral	355
18.4	Relation between Itô-Ramer, Ogawa and Skorohod integrals . .	362
18.5	Examples	364
